## **Modern Gaas Processing Methods:**

**Modern GaAs Processing Methods** Ralph Williams,1990 Containing updated material from the first edition this book adds several chapters covering RF testing techniques reliability process and manufacturing disciplines and process development experiment by design *Nonclassical Light from Semiconductor Lasers and LEDs* Jungsang Kim,Seema Somani,Yoshihisa Yamamoto,2012-12-06 The quantum statistical properties of light generated in a semiconductor laser and a light emitting diode LED have been a eld of intense research for more than a decade This research monograph discusses recent research activities in nonclassical light generation based on semiconductor devices performed mostly at Stanford University When a semiconductor material is used as the active medium to generate photons as in semiconductor lasers and LEDs the ow of carriers electrons andholes isconvertedintoa owofphotons Providedthattheconversionis fast and e cient the statistical properties of the carriers pump noise can be transferred to the photons if pump noise can be suppressed to below the shot noise value the noise in the photon output can also be suppressed below thePoissonlimit

Sinceelectronsandholesarefermionsandhavecharges the statisticalpropertiesoftheseparticlescanbesignificantly differentfromthose of photons if the structure of the light emitting device is properly designed to provide interaction between these particles There has been a discrepancy between the theoretical understanding and experimental observation of noise in a macroscopic resistor until very recently The dissipation that electrons experience in a resistor is expected to accompany the fluctuation due to partition noise leading to shot noise in the large dissipation limit as is the case with photons Experimental observation shows that thermal noise expected only in a thermal equilibrium situation zero bias condition is the only source of noise featured by a resistor dependent of the current
