Modern Biology Its Conceptual Foundations:

Modern Biology; Its Conceptual Foundations Elof Axel Carlson,1967 **The Scientific 100** John Simmons,Lynda Simmons,2000-09-01 Who are the great scientists throughout the ages and what exactly did they do to earn their importance From Archimedes to Newton to Einstein to Hawking The Scientific 100 provides the fascinating answers Vivid biographical sketches chronicle the lives and accomplishments of the world s preeminent scientists And in the tradition of the Citadel Press 100 Series they are ranked provocatively in order of influence an inspiration for lively discussion This unique volume is a browser s treasure trove and a handy reference for the general reader John Simmons has been associated with Current Biography for more than fifteen years He has written frequently about Nobel laureates in science A member of the New York Academy of Sciences he divides his time between New York City and Paris Doctors and Discoveries John Simmons,2002 Traces the history of western medicine through the lives of its major contributors profiling such well known figures as Hippocrates and Louis Pasteur as well as lesser known scientists including Elle Metchnikoff and Samuel Hahnemann

True Materialism Jensen Suther,2025-09-16 In recent years there has been an explosion of interest in both Marxism and German Idealism across the humanities but the discourse around the two traditions has grown stagnant and is still defined by the same century old debates materialism versus idealism history versus logic revolution versus reform With this exciting new work Jensen Suther endeavors to transform this discourse by presenting an unprecedented systematic vision of the possibility of a Hegelian Marxism grounded in Aristotle s logic of living form Through engagement with three titans of literary modernism Franz Kafka Thomas Mann and Samuel Beckett Suther pursues not only an account of Hegel s materialism but also a new critique of capitalist modernity Breaking with the received view of Marx s relation to German Idealism the book argues that the materialist critique of capitalist production is inseparable from Hegel s idea that the demand for freedom is a demand for mutual recognition The implication for Marxist criticism is that literary works cannot be understood apart from the political struggle for both recognition and new forms of social production Anyone invested in socialist politics the future of literary theory the history of philosophy and the study of modernism will want to contend with the way Suther rethinks Marxist theory and literary criticism from the ground up starting with their foundations in Hegelian thought Evolution: Genesis and Revelations C. Leon Harris,1981-01-01 In this comprehensive history of evolutionism C Leon Harris has combined primary source readings with clear pertinent background information to provide a solid basic understanding of the ways scientists have arrived at today s views of evolution Harris describes the major contributors to the theory of evolutionism placing each in the context of the general cultural influences to which he was exposed Each chapter also contains an explanation of the philosophical basis of the scientific approach of the period in question A lengthy bibliography provides direction for further reading on this important and timely subject **Evolutionary Causation** Tobias Uller,Kevin N. Lala,2019-09-03 A comprehensive treatment of the concept of causation in evolutionary biology that makes

clear its central role in both historical and contemporary debates. Most scientific explanations are causal. This is certainly the case in evolutionary biology which seeks to explain the diversity of life and the adaptive fit between organisms and their surroundings. The nature of causation in evolutionary biology however is contentious. How causation is understood shapes the structure of evolutionary theory and historical and contemporary debates in evolutionary biology have revolved around the nature of causation. Despite its centrality and differing views on the subject the major conceptual issues regarding the nature of causation in evolutionary biology are rarely addressed. This volume fills the gap bringing together biologists and philosophers to offer a comprehensive interdisciplinary treatment of evolutionary causation. Contributors first address biological motivations for rethinking evolutionary causation considering the ways in which development, extra genetic inheritance and niche construction challenge notions of cause and process in evolution and describing how alternative representations of evolutionary causation can shed light on a range of evolutionary problems. Contributors then analyze evolutionary causation from a philosophical perspective considering such topics as causal entanglement, the commingling of organism and environment and the relationship between causation and information. Contributors: John A Baker, Lynn Chiu, David I Dayan, René A Duckworth, Marcus W Feldman, Susan A Foster, Melissa A Graham, Heikki Helanter, Kevin N Lala, Armin P Moczek, John Odling-Smee, Jun Otsuka, Massimo Pigliucci, Arnaud Pocheville, Arlin Stoltzfus, Karola Stotz, Sonia E Sultan, Christoph Thies, Tobias Uller, Denis M Walsh, Richard A Watson.
