Multi-Sensor Imaging and Fusion: Methods, Evaluations, and Applications, volume III Zhiqin Zhu,Yu Liu,Huafeng Li,Jinxing Li ,Bo Xiao,2025-11-06 Multi sensor image fusion focuses on processing images of the same object or scene acquired by multiple sensors in which various sensors with multi level and multi spatial information are complemented and combined to ultimately yield a consistent interpretation of the observed environment In recent years multi sensor image fusion has become a highly active topic and various fusion methods have been proposed Many effective processing methods including multi scale transformation fuzzy inference and deep learning have been introduced to design fusion algorithms Despite the great progress there are still some noteworthy challenges in the field such as the lack of unified fusion theories and methods for effective generalized fusion the lack of fault tolerance and robustness the lack of benchmarks for performance evaluation the lack of work on specific applications of multi sensor image fusion and so on This Research Topic focuses on reporting advanced studies related to multi sensor image fusion including methods evaluations and applications aiming to promote the development of multi sensor image fusion techniques and applied it to medical image segmentation biology analysis and astronomy imaging More specifically this special issue expects high quality work such as unified fusion theories and effective generalized fusion methods effective performance evaluation methods for multi sensor image fusion and practical applications of multi sensor image fusion in classification detection and segmentation tasks Multi sensor fusion methods can be developed based on traditional processing methods or deep learning methods For performance evaluations benchmarks involving datasets objective metrics and baseline creation methods are welcome to be investigated In addition specific applications are also welcome to be studied such as the fusion of images from different modalities using multi sensor fusion techniques Multi sensor image registration Multi sensor image fusion High dynamic range imaging Multi sensor modality object detection and segmentation Machine learning deep learning for multi sensor image processing Multi sensor image fusion datasets and benchmarks Objective evaluation of multi sensor image fusion Multi sensor image fusion in different fields Multi sensor information monitoring and detection Multi sensor information processing Multi source natural Language and Image Fusion Processing

Investigations on Multi-Sensor Image System and Its Surveillance Applications Zheng Liu,2010-08 This thesis investigates the issues of implementing multi sensor imaging system for surveillance applications Three topics for the fusion

of infrared and electro optic images are studied i.e. registration fusion and evaluation. The first topic is the image registration or alignment which is to associate corresponding pixels in multiple images to the same physical point in the scene. A trajectory based method for registering infrared and electro optic video sequences is proposed in this study. The initial registration parameters are derived from matching the trajectories across the consecutive video frames. Further refinement can be carried out by applying a maximum mutual information approach. The frame difference from which the feature point is detected is found with an image structural similarity measurement. The second topic is the implementation of pixel level fusion. Two applications are considered in this study. Motivated by the adaptive enhancement a modified pixel level fusion scheme is proposed to implement the context enhancement. A visual image is first enhanced with the corresponding infrared image. Then the enhanced image is fused with the visual image again to highlight the background features. This achieves a context enhancement most suitable for human perception. As the application of multi sensor concealed weapon detection (CWD) is concerned this thesis clarifies the requirements and concepts for CWD. How the CWD application can benefit from multi sensor fusion is identified and a framework of multi sensor CWD is proposed. A solution to synthesize a composite image from infrared and visual image is presented with experimental results. The synthesized image on one hand provides both the information of personal identification and the suspicious region of concealed weapons on the other hand implements the privacy protection which appears to be an important aspect of the CWD process. The third topic is about the fusion performance assessment. In this study the evaluation metrics are developed for reference based assessment and blind assessment respectively. An absolute measurement of image features namely phase congruency is employed. Future work should include the reliability and optimization study of multiple image sensors from applications and human perception related perspectives. This thesis is a contribution to such research.

Multi-Sensor Image Fusion and Its Applications Rick S. Blum, Zheng Liu, 2018-10-03. Taking another lesson from nature the latest advances in image processing technology seek to combine image data from several diverse types of sensors in order to obtain a more accurate view of the scene very much the same as we rely on our five senses. Multi Sensor Image Fusion and Its Applications is the first text dedicated to the theory and practice of the registration and fusion of image data covering such approaches as statistical methods color related techniques model based methods and visual information display strategies. After a review of state of the art image fusion techniques the book provides an overview of fusion algorithms and fusion performance evaluation. The following chapters explore recent progress and practical applications of the proposed techniques to solving problems in such areas as medical diagnosis surveillance and biometric systems remote sensing nondestructive evaluation blurred image restoration and image quality assessment. Recognized leaders from industry and academia contribute the chapters reflecting the latest research trends and providing useful algorithms to aid implementation.
