## **Multidimensional Minimizing Splines Theory And Applications:**

*Multidimensional Minimizing Splines* R. Arcangéli, María Cruz López de Silanes, Juan José Torrens, 2006-02-27 This book is of interest to mathematicians, geologists, engineers and in general researchers and post graduate students involved in spline function theory, surface fitting problems or variational methods. From reviews: The book is well organized and the English is very good. I recommend the book to researchers in approximation theory and to anyone interested in bivariate data fitting. L. L. Schumaker, Mathematical Reviews 2005

*Polynomials* Cheon Seoung Ryoo, 2019-05-02 Polynomials are well known for their ability to improve their properties and for their applicability in the interdisciplinary fields of engineering and science. Many problems arising in engineering and physics are mathematically constructed by differential equations. Most of these problems can only be solved using special polynomials. Special polynomials and orthonormal polynomials provide a new way to analyze solutions of various equations often encountered in engineering and physical problems. In particular, special polynomials play a fundamental and important role in mathematics and applied mathematics. Until now, research on polynomials has been done in mathematics and applied mathematics only. This book is based on recent results in all areas related to polynomials. Divided into sections on theory and application, this book provides an overview of the current research in the field of polynomials. Topics include cyclotomic and Littlewood polynomials, Descartes rule of signs, obtaining explicit formulas and identities for polynomials defined by generating functions, polynomials with symmetric zeros, numerical investigation on the structure of the zeros of the  $q$ -tangent polynomials, investigation and synthesis of robust polynomials in uncertainty on the basis of the root locus theory, pricing basket options by polynomial approximations and orthogonal expansion in time domain method for solving Maxwell's equations using parallelizing in order scheme.

**Analytic Number Theory, Approximation Theory, and Special Functions** Gradimir V. Milovanović, Michael Th. Rassias, 2014-07-08 This book, in honor of Hari M. Srivastava, discusses essential developments in mathematical research in a variety of problems. It contains thirty-five articles written by eminent scientists from the international mathematical community, including both research and survey works. Subjects covered include analytic number theory, combinatorics, special sequences of numbers and polynomials, analytic inequalities and applications, approximation of functions and quadratures, orthogonality and special and complex functions. The mathematical results and open problems discussed in this book are presented in a simple and self-contained manner. The book contains an overview of old and new results, methods and theories toward the solution of longstanding problems in a wide scientific field as well as new results in rapidly progressing areas of research. The book will be useful for researchers and graduate students in the fields of mathematics, physics and other computational and applied sciences.

Models and

Methods in Economics and Management Science Fouad El Ouardighi, Konstantin Kogan, 2013-09-16 With this book

distinguished and notable contributors wish to honor Professor Charles S. Tapiero's scientific achievements. Although it covers only a few of the directions Professor Tapiero has taken in his work it presents important modern developments in theory and in diverse applications as studied by his colleagues and followers further advancing the topics Tapiero has been investigating. The book is divided into three parts featuring original contributions covering the following areas: general modeling and analysis, applications to marketing, economy and finance, and applications to operations and manufacturing. Professor Tapiero is among the most active researchers in control theory in the late sixties he started to enthusiastically promote optimal control theory along with differential games successfully applying it to diverse problems ranging from classical operations research models to finance, risk and insurance, marketing, transportation and operations management, conflict management and game theory engineering, regional and urban sciences, environmental economics and organizational behavior. Over the years Professor Tapiero has produced over 300 papers and communications and 14 books which have had a major impact on modern theoretical and applied research. Notable among his numerous pioneering scientific contributions are the use of graph theory in the behavioral sciences, the modeling of advertising as a random walk, the resolution of stochastic zero sum differential games, the modeling of quality control as a stochastic competitive game and the development of impulsive control methods in management. Charles Tapiero's creativity applies both in formulating original issues, modeling complex phenomena and solving complex mathematical problems.

**Computer Vision: Advances and Applications** Rangachar

Kasturi, Ramesh Jain, 1991 Together these books two volumes of Computer Vision Principles and Advances and Applications constitute a tutorial, a guide to practical applications and a reference source on recent advances in computer vision research.

The tutorial component will benefit students and professionals who are relatively new to the computer vision field. The description of practical applications of machine vision technology will act as a guide to practicing engineers. And the collection of papers on recent research advances will be an excellent reference source for active researchers in the computer

vision field We believe that the ideas and techniques described in these two books will continue to influence vision system research and design for many years to come Variational Regularization of 3D Data Hebert Montegranario,Jairo Espinosa,2014-03-14 Variational Regularization of 3D Data provides an introduction to variational methods for data modelling and its application in computer vision In this book the authors identify interpolation as an inverse problem that can be solved by Tikhonov regularization The proposed solutions are generalizations of one dimensional splines applicable to n dimensional data and the central idea is that these splines can be obtained by regularization theory using a trade off between the fidelity of the data and smoothness properties As a foundation the authors present a comprehensive guide to the necessary fundamentals of functional analysis and variational calculus as well as splines The implementation and numerical experiments are illustrated using MATLAB The book also includes the necessary theoretical background for approximation methods and some details of the computer implementation of the algorithms A working knowledge of multivariable calculus and basic vector and matrix methods should serve as an adequate prerequisite
