Multifunction Array Radar Dale R. Billetter, 1989 This definitive book supplies the information needed to specify and design a multifunction array radar system. With minimal mathematics the book shows how radars smaller in aperture and power can meet demands formerly conceived for the larger rotating and phased array radars. *Multifunction Array Radar* Sergio Sabatini, Marco Tarantino, 1994 This book details the advantages of MFAR main parameter design and guides you through parameter and performance evaluation procedures. It presents practical design information on combinations of various radar functions, clutter conditions, multipath and transmitted waveform design when Doppler filters adapted for clutter cancellation.

Radar Electronic Countermeasures System Design Richard J. Wiegand, 1991 An introduction for readers with a general technical background to the design and operation of active electronic countermeasure jamming systems intended to negate the effectiveness of radar systems used by the bad guys. Presents both technical and practical aspects of the hardware and software needed. *Knowledge Based Radar Detection, Tracking and Classification* Fulvio Gini, Muralidhar Rangaswamy, 2008-05-19 Discover the technology for the next generation of radar systems. Here is the first book that brings together the key concepts essential for the application of Knowledge Based Systems (KBS) to radar detection, tracking, classification and scheduling. The book highlights the latest advances in both KBS and radar signal and data processing, presenting a range of perspectives and innovative results that have set the stage for the next generation of adaptive radar systems. The book begins with a chapter introducing the concept of Knowledge Based KB radar. The remaining nine chapters focus on current developments and recent applications of KB concepts to specific radar functions. Among the key topics explored are Fundamentals of relevant KB techniques, KB solutions as they apply to the general radar problem, KBS applications for the constant false alarm rate processor, KB control for space time adaptive processing, KB techniques applied to existing radar systems, Integrated end to end radar signals, Data processing with overarching KB control. All chapters are self-contained, enabling readers to focus on those topics of greatest interest. Each one begins with introductory remarks, moves on to detailed discussions and analysis, and ends with a list of references. Throughout the presentation, the authors offer examples of how KBS works and how it can dramatically improve radar performance and capability. Moreover, the authors forecast the impact of KB technology on future systems, including important civilian, military and homeland defense applications. With chapters contributed by leading international researchers and pioneers in the field, this text is recommended for both students and professionals in radar and sonar detection, tracking and classification, and radar resource management.
