Multimedia And Imaging Databases:

Multimedia and Imaging Databases Setrag Khoshafian,Brad Baker,1996 Affordable and mainstream manipulation of multimedia data types will lead to tremendous growth in imaging and multimedia data in general computing environments Multimedia and imaging applications can now provide benefits to common business applications by integrating voice sound images animation and digitized video Ultimately it will be possible to convert all information that is currently stored on paper video and film into a digitized environment This will allow users to organize search and route multimedia objects over local and wide area networks in real time The authors introductory level presentation of this new class of data types supplies the database technology required for effective manipulation and storage Multimedia and database experts Khoshafian and Baker aptly illustrate the ability of multimedia database systems to concurrently share access and query large collections of multimedia information They introduce the elemental concepts of object and relational databases and then apply them to multimedia and imaging databases Fundamental database topics discussed include querying transaction support recovery security and storage This book provides information essential to the incorporation of multimedia databases that will improve the quantity and quality of information manipulated by computer users in many areas including medicine computer aided design and information retrieval systems **Image Databases** Vittorio Castelli,Lawrence D. Bergman,2004-03-24 The explosive growth of multimedia data transmission has generated a critical need for efficient high capacity image databases as well as powerful search engines to retrieve image data from them This book brings together contributions by an international all star team of innovators in the field who share their insights into all key aspects of image database and search engine construction Readers get in depth discussions of the entire range of crucial image database architecture indexing and retrieval transmission display and user interface issues And using examples from an array of disciplines the authors present cutting edge applications in medical imagery multimedia communications earth science remote sensing and other major application areas **Multimedia Image and Video Processing** Ling Guan,2017-12-19 As multimedia applications have become part of contemporary daily life numerous paradigm shifting technologies in multimedia processing have emerged over the last decade Substantially updated with 21 new chapters Multimedia Image and Video Processing Second Edition explores the most recent advances in multimedia research and applications This edition presents a comprehensive treatment of multimedia information mining security systems coding search hardware and communications as well as multimodal information fusion and interaction Clearly divided into seven parts the book begins with a section on standards fundamental methods design issues and typical architectures It then focuses on the coding of video and multimedia content before covering multimedia search retrieval and management After examining multimedia security the book describes multimedia communications and networking and explains the architecture design and implementation for multimedia image and video processing It concludes with a section on multimedia systems and applications Written by some of the most prominent

experts in the field this updated edition provides readers with the latest research in multimedia processing and equips them with advanced techniques for the design of multimedia systems   *Multimedia Systems and Content-based Image Retrieval* Sagarmay Deb,2004-01-01 Business intelligence has always been considered an essential ingredient for success However it is not until recently that the technology has enabled organizations to generate and deploy intelligence for global competition These technologies can be leveraged to create the intelligent enterprises of the 21st century that will not only provide excellent and customized services to their customers but will also create business efficiency for building relationships with suppliers and other business partners on a long term basis Creating such intelligent enterprises requires the understanding and integration of diverse enterprise components into cohesive intelligent systems Anticipating that future enterprises need to become intelligent Intelligent Enterprises of the 21st Century brings together the experiences and knowledge from many parts of the world to provide a compendium of high quality theoretical and applied concepts methodologies and techniques that help diffuse knowledge and skills required to create and manage intelligent enterprises of the 21st century for gaining sustainable competitive advantage in a global environment This book is a comprehensive compilation of the state of the art vision and thought processes needed to design and manage globally competitive business organizations   **Multimedia Databases and Image Communication** Maurizio Tucci,2001-09-05 This book constitutes the refereed proceedings of the Second International Workshop on Multimedia Databases and Image Communication MDIC 2001 held in Amalfi Italy in September 2001 The 16 revised full papers presented together with two invited papers were carefully reviewed and selected for inclusion in the book The papers are organised in topical sections on image and visual computing applications multimedia technology image and visual information querying and browsing and video indexing and communication   **Database and Expert Systems Applications** A Min Tjoa,Roland Wagner,2012-12-06 Use and development of database and expert systems can be found in all fields of computer science The aim of this book is to present a large spectrum of already implemented or just being developed database and expert systems Contributions cover new requirements concepts for implementations e g languages models storage structures management of meta data system architectures and experiences gained by using traditional databases in as many areas of applications as possibble at least in the fields listed The aim of the book is to inspire a fruitful dialogue between developement in practice users of database and expert systems and scientists working in the field   **Medical Image Databases** Stephen T.C. Wong,1998-09-30 Medical Image Databases covers the new technologies of biomedical imaging databases and their applications in clinical services education and research Authors were selected because they are doing cutting edge basic or technology work in relevant areas This was done to infuse each chapter with ideas from people actively investigating and developing medical image databases rather than simply review the existing literature The authors have analyzed the literature and have expanded on their own research They have also addressed several common threads within their generic topics These include system architecture standards information retrieval data

modeling image visualizations query languages telematics data mining and decision supports The new ideas and results reported in this volume suggest new and better ways to develop imaging databases and possibly lead us to the next information infrastructure in biomedicine Medical Image Databases is suitable as a textbook for a graduate level course on biomedical imaging or medical image databases and as a reference for researchers and practitioners in industry

Electronic Imaging and Multimedia Systems II Liwei Zhou,Zhongsheng Li,1998 *Intelligent Image Databases* Yihong Gong,2012-12-06 Intelligent Image Databases Towards Advanced Image Retrieval addresses the image feature selection issue in developing content based image retrieval systems The book first discusses the four important issues in developing a complete content based image retrieval system and then demonstrates that image feature selection has significant impact on the remaining issues of system design Next it presents an in depth literature survey on typical image features explored by contemporary content based image retrieval systems for image matching and retrieval purposes The goal of the survey is to determine the characteristics and the effectiveness of individual features so as to establish guidelines for future development of content based image retrieval systems Intelligent Image Databases Towards Advanced Image Retrieval describes the Advanced Region Based Image Retrieval System ARBIRS developed by the authors for color images of real world scenes They have selected image regions for building ARBIRS as the literature survey suggests that prominent image regions along with their associated features provide a higher probability for achieving a higher level content based image retrieval system A major challenge in building a region based image retrieval system is that prominent regions are rather difficult to capture in an accurate and error free condition particularly those in images of real world scenes To meet this challenge the book proposes an integrated approach to tackle the problem via feature capturing feature indexing and database query Through comprehensive system evaluation it is demonstrated how these systematically integrated efforts work effectively to accomplish advanced image retrieval Intelligent Image Databases Towards Advanced Image Retrieval serves as an excellent reference and may be used as a text for advanced courses on the topic **Multimedia Database Systems** V.S. Subrahmanian,1996 This book presents basic research establishing the theory and practice of multimedia database systems Issues relating to the theory of such systems query languages for multimedia databases indexing structures implementations and industrial and government applications are addressed The book will form a valuable text for advanced courses Electronic Imaging and Multimedia Systems Chung-Sheng Li,Guo jia zi ran ke xue ji jin wei yuan hui,1996 *Storage and Retrieval for Media Databases* ,2001 Storage and Retrieval for Still Image and Video Databases ,1996
