Multimedia Database Systems Issues And Research Directions:

Multimedia Database Systems V.S. Subrahmanian, Sushil Jajodia, 2012-12-06 With the rapid growth in the use of computers to manipulate process and reason about multimedia data the problem of how to store and retrieve such data is becoming increasingly important. Thus although the field of multimedia database systems is only about 5 years old it is rapidly becoming a focus for much excitement and research effort. Multimedia database systems are intended to provide unified frameworks for requesting and integrating information in a wide variety of formats such as audio and video data, document data and image data. Such data often have special storage requirements that are closely coupled to the various kinds of devices that are used for recording and presenting the data and for each form of data there are often multiple representations and multiple standards all of which make the database integration task quite complex. Some of the problems include what a multimedia database query means, what kinds of languages to use for posing queries, how to develop compilers for such languages, how to develop indexing structures for storing media on ancillary devices, data compression techniques, how to present and author presentations based on user queries. Although approaches are being developed for a number of these problems they have often been ad hoc in nature and there is a need to provide a principled theoretical foundation.

Multimedia Database Management Systems B. Prabhakaran, 2012-12-06 Multimedia Database Management Systems presents the issues and the techniques used in building multimedia database management systems. Chapter 1 provides an overview of multimedia databases and underlines the new requirements for these applications. Chapter 2 discusses the techniques used for storing and retrieving multimedia objects. Chapter 3 presents the techniques used for generating metadata for various media objects. Chapter 4 examines the mechanisms used for storing the index information needed for accessing different media objects. Chapter 5 analyzes the approaches for modeling media objects both their temporal and spatial characteristics. Object oriented approach with some additional features has been widely used to model multimedia information. The book discusses two systems that use object oriented models: OVID (Object Video Information Database) and Jasmine. The models for representing temporal and spatial requirements of media objects are then studied. The book also describes authoring techniques used for specifying temporal and spatial characteristics of multimedia databases. Chapter 6 explains different types of multimedia queries, the methodologies for processing them and the language features for describing them. The features offered by query languages such as SQL/MM (Structured Query Language for Multimedia), PICQUERY and Video SQL are also studied. Chapter 7 deals with the communication requirements for multimedia databases. A client accessing multimedia data over computer networks needs to identify a schedule for retrieving various media objects composing the database. The book identifies possible ways for generating a retrieval schedule. Chapter 8 ties together the techniques discussed in the previous chapters by providing a simple architecture of a distributed multimedia database management system. Multimedia Database Management Systems can be used as a text for graduate students and researchers.

working in the area of multimedia databases In addition the book serves as essential reading material for computer professionals who are in or moving to the area of multimedia databases

Multimedia Database in Perspective Peter M.G. Apers, Henk M. Blanken, Maurice A.W. Houtsma, 2012-12-06 During the last decade multimedia has emerged as a major research and development area Pushed by advanced technology like huge capacity storage devices fast networks and powerful work stations new applications have arisen Many definitions of multimedia systems exist one of them being computer systems that support interactive use of at least one of the following information sources graphics image voice sound and video These systems have caused a boom in the world of entertainment but also in other business areas great opportunities for novel products and services are available The size of multimedia data is often huge and the storage of huge amounts of data is a task normally allocated to database management systems Although some modern database management systems offer facilities to support development of multimedia applications many problems related to multimedia support are still not well understood This book reports on research efforts to solve some of these problems An introductory knowledge of databases and also of operating systems and network technology is assumed The book is very suitable as material for courses at senior or graduate level but also for upgrading the skills of computer scientists working on database management systems multimedia systems or applications The book consists of four parts Part I is called Requirements for a Multimedia Database and comprises chapters one to three Chapter one presents an outline of the book

Multimedia Database Management Systems B. Thuraisingham, Kingsley C. Nwosu, P. Bruce Berra, 2012-12-06 Multimedia Database Management Systems brings together in one place important contributions and up to date research results in this important area Multimedia Database Management Systems serves as an excellent reference providing insight into some of the most important research issues in the field

Handbook of Internet and Multimedia Systems and Applications Borko Furht, 1998-12-29 Today multimedia applications on the Internet are still in their infancy They include personalized communications such as Internet telephone and videophone and interactive applications such as video on demand videoconferencing distance learning collaborative work digital libraries radio and television broadcasting and others Handbook of Internet and Multimedia Systems and Applications a companion to the author's Handbook of Multimedia Computing probes the development of systems supporting Internet and multimedia applications Part one introduces basic multimedia and Internet concepts user interfaces standards authoring techniques and tools and video browsing and retrieval techniques Part two covers multimedia and communications systems including distributed multimedia systems visual information systems multimedia messaging and news systems conference systems and many others Part three presents contemporary Internet and multimedia applications including multimedia education interactive movies multimedia document systems multimedia broadcasting over the Internet and mobile multimedia

Distributed Multimedia Database Technologies Supported by MPEG-7 and MPEG-21 Harald Kosch, 2003-11-24 A multimedia system needs a mechanism to communicate with its environment the Internet clients and

applications MPEG 7 provides a standard metadata format for global communication but lacks the framework to let the various players in a system interact MPEG 21 closes this gap by establishing an infrastructure for a distributed multimedia frame

Principles of Multimedia Database Systems V. S. Subrahmanian, 1998 Until recently databases contained easily indexed numbers and text Today in the age of powerful graphically based computers and the world wide web databases are likely to contain a much greater variety of data forms including images sound video clips and even handwritten documents When multimedia databases are the norm traditional methods of working with databases no longer apply How do you query a video library or an image database containing x rays or sounds in an audio database

Principles of Multimedia Database Systems explains how to work with these new multimedia data forms It is the first comprehensive treatment of the skills and techniques required to build maintain and query multimedia databases This book presents the mix of techniques necessary for working with multimedia databases including synthetic solutions for the design and deployment of multimedia database systems Because rapid technological developments are constantly changing the landscape of multimedia databases the book teaches basic theoretical principles applicable to any database Covers the major issues of multimedia database design with a strong focus on distributed multimedia databases Discusses important topics including how to organize the vast data types storage and retrieval and creation and delivery of multimedia presentations Organized around the lively scenario of a crime fighting database that evolves as new concepts are introduced Includes numerous exercises and suggestions for programming projects Additional materials on the web include updates on line supplements and links to downloadable software

Interoperating Geographic Information Systems Michael Goodchild, Max J. Egenhofer, Robin Fegeas, Cliff Kottman, 2012-12-06 Geographic information systems have developed rapidly in the past decade and are now a major class of software with applications that include infrastructure maintenance resource management agriculture Earth science and planning But a lack of standards has led to a general inability for one GIS to interoperate with another It is difficult for one GIS to share data with another or for people trained on one system to adapt easily to the commands and user interface of another Failure to interoperate is a problem at many levels ranging from the purely technical to the semantic and the institutional Interoperating Geographic Information Systems is about efforts to improve the ability of GISs to interoperate and has been assembled through a collaboration between academic researchers and the software vendor community under the auspices of the US National Center for Geographic Information and Analysis and the Open GIS Consortium Inc It includes chapters on the basic principles and the various conceptual frameworks that the research community has developed to think about the problem Other chapters review a wide range of applications and the experiences of the authors in trying to achieve interoperability at a practical level Interoperability opens enormous potential for new ways of using GIS and new mechanisms for exchanging data and these are covered in chapters on information marketplaces with special reference to geographic information Institutional arrangements are also likely to be profoundly affected by the trend towards

interoperable systems and nowhere is the impact of interoperability more likely to cause fundamental change than in education as educators address the needs of a new generation of GIS users with access to a new generation of tools The book concludes with a series of chapters on education and institutional change Interoperating Geographic Information Systems is suitable as a secondary text for graduate level courses in computer science geography spatial databases and interoperability and as a reference for researchers and practitioners in industry commerce and government *Storage and Retrieval for Media Databases* ,2001 **Multimedia Storage and Archiving Systems** ,1998 **Multimedia Data Management** Wolfgang Klas,Amit Sheth,1998 Here is the authoritative handbook on multimedia metadata and data management In one volume it gathers a wealth of information from the field s leading international experts in this emerging specialty Multimedia data text image voice and video poses unique challenges to product developers and database professionals in midsized to giant organizations They need to know how multimedia can be effectively stored accessed and integrated into applications The key is metadata which acts as an umbrella for multimedia data and allows it to be modeled and managed In this invaluable guide well known contributors from the U S Japan and Europe examine the metadata concept present relevant standards and discuss its global use in video databases speech documents satellite and medical imaging and other applications *IEEE International Forum on Research and Technology Advances in Digital Libraries* ,1998 **Database and Expert Systems Applications** ,2000 *Proceedings of the Seventeenth ACM SIGACT-SIGMOD-SIGART Symposium on Principles of Database Systems* ACM Special Interest Group for Algorithms and Computation Theory,Association for Computing Machinery.
