**Multiparadigm Programming** Brian McNamara,2004 Constructs for functional and logic programming can be smoothly integrated into an existing object oriented language We demonstrate this in the context of C a statically typed object oriented language with effects and parametric polymorphism via two libraries FC and LC FC is a library for functional programming in C FC supports higher order polymorphic functions lazy lists and a small lambda language it also contains a large library of useful functions datatypes combinators and monads LC is a library for logic programming in C LC provides the same general functionality as Prolog including the ability to return query results lazily one at a time Both libraries are embedded in C so that they share C s static type system and the library interfaces provide straightforward ways for code from within one paradigm to call out to another Our work describes the techniques used to implement these libraries in C and shows that the resulting multiparadigm language has useful applications in real world domains We also describe how many of the implementation techniques can be generalized from C and applied to other programming languages to yield similar results
