Multiple Primary Cancers:

Multiple Primary Malignant Neoplasms Bruce S. Schoenberg, 2012-12-06 When asked why he robbed banks an astute and successful criminal is said to have replied Because that's where the money is kept Why study patients with multiple primary cancers The answer follows the same practical approach Because the intensive investigation of such patients is very likely to yield data useful to both the clinical and research oncologist Studies of this problem provide an immediate return for the clinician responsible for the care of cancer patients With improved forms of therapy these individuals are enjoying longer periods of survival One important factor in maintaining increased survival is the early detection and treatment of new primary tumors which may develop Analyses of multiple primary malignancies serve as a guide to the probable anatomic location of a subsequent primary and help define characteristics of the individual at high risk for multiple primary cancer But just as treatment may improve the life of the cancer patient it may also increase the risk of a subsequent malignancy Studies of multiple primaries provide an efficient means for quantifying potentially harmful effects of current therapeutic modalities

Multiple Primary Cancers Alfred I. Neugut, Eliezer Robinson, Anna T. Meadows, 1999 The purpose of this text is to help develop a better understanding of the nature of cancer to expand prevention strategies and to improve diagnostic and prognostic skills centred around multiple primary cancers Clinical studies focusing on the aetiology of multiple primary cancers statistical data presented in tables and discussions on various organ sites and the possible occurrence of multiple primary cancers are addressed throughout the text The first part reviews various methodological and statistical considerations in the study management and prevention of primary secondary and multiple primary cancers An entire chapter contains tables of incidence rates of various multiple primary cancers that prove helpful in subsequent chapters Part Two discusses predisposing genetic conditions and various forms of environmental factors that are associated with multiple primary cancers Finally the last section reviews selected types of cancers and focuses on possible clinical implications for occurrences of specific multiple primary cancers

Multiple Primary Malignant Neoplasms Charles G. Moertel, 2012-12-06 87 3 All polyps should be promptly treated by resection or fulguration as soon as possible after their discovery 4 The physician must assume the responsibility for impressing the patient with the necessity for frequent and regular follow up examinations These examinations must be done at no longer than 1 year intervals for at least 5 years after treatment of the initial lesion and preferably at yearly intervals thereafter 5 A minimal follow up examination must include a proctoscopic examination as well as a careful roentgenologic examination of the colon Summary The literature concerning multiple colonic carcinomas has been reviewed Data have been presented on 261 cases in which multiple carcinomas of the colon were seen at the Mayo Clinic from January 1 1944 through December 31 1953 0 This represents a known rate of occurrence of 4.3% A marked tendency to multiplicity has been observed in carcinoma of the colon associated with multiple polyposis or with chronic ulcerative colitis Some evidence has been obtained of hereditary factors in predisposition to

malignant disease of the colon When the diagnosis of a malignant lesion of the colon or rectum has been made the entire large bowel must be considered a potential source of malignant disease An integral part of the management of carcinoma of the large bowel must be constant vigilance to ensure early diagnosis and adequate treatment of both simultaneous and interval lesions References ALBRECHT P Ober die Multiplizitat primarer maligner Geschwulste Oncologia Basel 5 12 1952

Boice,1985 **MULTIPLE PRIMARY CANCERS- PROCEEDINGS OF AN INTERNATIONAL WORKSHOP- NATIONAL CANCER INSTITUTE- AMERICAN CANCER SOCIETY.** , Schottenfeld and Fraumeni Cancer Epidemiology and Prevention Michael J. Thun,Martha S. Linet,James R. Cerhan,Christopher A. Haiman,David Schottenfeld,2018 The definitive reference for budding and experienced cancer epidemiologists alike American Journal of Epidemiology Practitioners in epidemiology and oncology will find immense value in this JAMA Since its initial publication in 1982 CANCER EPIDEMIOLOGY AND PREVENTION has served as the premier reference work for students and professionals working to understand the causes and prevention of cancer in humans Now revised for the first time in more than a decade this fourth edition provides a comprehensive summary of the global patterns of cancer incidence and mortality current understanding of the major causal determinants and a rationale for preventive interventions Special attention is paid to molecular epidemiologic approaches that address the wider role of genetic predisposition and gene environment interactions in cancer etiology and pathogenesis New and timely chapters on environmental and social epidemiologic factors include The role of social class disparities The role of obesity and physical inactivity The potential effects of electromagnetic fields and radiofrequency radiation The principles of cancer chemoprevention For both seasoned professionals and newer generations of students and researchers this fourth edition of CANCER EPIDEMIOLOGY AND PREVENTION remains the authority in the field a work of distinction that every lab library student professional or researcher should have close at hand **The Prevention of Second Primary Cancers** David I. McLean,2008-01-01 A second primary cancer SPC is a new primary cancer developing in a person with a history of cancer at a new site or tissue and subsequent to the initial cancer Advances in cancer treatment have led to marked improvements in cancer cure rates over the past 30 years and the control of risk factors has further increased longevity Still cancer survivors are at increased risk not only for recurrence of the primary cancer but also for the development of second primary malignancies the latter being especially true for survivors of childhood cancer SPCs are now more common and research into them has intensified This monograph provides a synthesis of the current research on SPC culminating in pertinent summary charts covering the whole spectrum of first and second primary cancers and the association between them Readers will gain a general understanding of the epidemiology and of the excess risk of SPCs following an implicated first malignancy The known or suspected etiologic factors for SPCs are identified and the field is further narrowed to those factors that are

modifiable in practice Effective preventive measures that might reduce the burden of SPC both for individuals and across at risk populations are presented Providing practical guidance in terms of possibilities and priorities this monograph will be a valuable tool for oncologists general practitioners and health administrators **Journal of the National Cancer Institute** National Cancer Institute (U.S.),1969 **A Consideration of the Reasons for Multiple Primary Cancers** David Greene,1949 **Cancer Epidemiology and Prevention** Michael Thun,Martha S. Hall,2016 Despite improvements in cancer survival rates cancer survivors have an

increased risk for a number of health issues including the development of multiple primary cancers MPCs MPCs have been well studied in childhood and adult cancer survivors but the risk of developing MPCs is not well characterized in survivors of adolescent and young adult AYA cancers Additionally the role of survival from MPCs in AYA cancers has not yet been examined The present study utilized data from the Surveillance Epidemiology and End Results SEER registries 1973 2012 to assess the risk for MPCs and survival after a second primary cancer SPC in survivors of AYA cancers Individuals diagnosed with a first primary cancer between the ages of 15 and 39 were included in this study Overall and site specific standardized incidence ratios SIR and excess absolute risks EAR were assessed and multivariable Poisson regression models were used to assess the risk for MPCs over time Kaplan Meier and Cox proportional hazards modeling were utilized to assess survival after a SPC Out of 227 569 AYA survivors 15 069 6 6% developed a MPC two or more months after the first primary cancer Survivors of AYA cancers had a nearly 2 fold increased risk of developing an MPC SIR 1 86 95% CI 1 84 1 89 The most common MPCs in AYAs were breast cancer digestive system cancers and skin cancers Age at first cancer diagnosis gender race radiation treatment type of first primary cancer and latency were significantly associated with the development of a MPC We observed females had a reduced risk for death compared to males HR 0 73 95% CI 0 68 0 78 after a SPC and Blacks had an increased risk for death after a SPC compared to Whites HR 1 23 95% CI 1 18 1 38 Our findings indicate that AYA cancer survivors are at higher risk for multiple primary cancers and provide new knowledge of the survival from second primary cancers in the AYA population We observed that males and Blacks have a worse prognosis after the development of a subsequent cancer This may have direct implications on the clinical management and prevention strategies for AYA cancer survivors
