Fact Sheet

What is Multiple Sclerosis?

Multiple sclerosis (MS) is a **progressive disease of the central nervous system** where an immune response destroys brain, optic nerve and spinal cord tissue^{1, 2}, leading to irreversible motor disability and cognitive impairment over time.³ Typically, **diagnosis occurs between the ages of 20 and 40⁴**, greatly impacting a person's career, income and family life.^{5, 6} Affecting over **1.1 million people across Europe⁷**, MS brings with it considerable costs to health and social welfare systems, as well as the wider economy in terms of decreased productivity from both people with MS and their carers.^{8, 9, 10, 11, 12} The unpredictable and invisible nature of some symptoms makes it particularly challenging to diagnose and manage. Furthermore, the personal and societal impact of MS grows significantly as the condition progresses and disability worsens.^{13, 14, 15}
