## **Multiprocessing In Meteorological Models:**

**Multiprocessing in Meteorological Models** Geerd-R. Hoffmann, David F. Snelling, 2012-12-06 Numerical weather prediction on the one hand needs a very large number of floating point calculations but on the other hand is very time critical. Therefore the largest computers available i.e. the supercomputers have usually been acquired by the national meteorological services long before they were used in other fields of research or business. Since the available technology limits the speed of any single computer parallel computations have become necessary to achieve further improvements in the number of results produced per time unit. This book collects the papers presented at two workshops held at ECMWF on the topic of parallel processing in meteorological models. It provides an insight into the state of the art in using parallel processors operationally and allows extrapolation to other time critical applications. It also shows trends in migrating to massive parallel systems in the near future.

G. Farmer, Michael J. Rycroft, 1991 Provides a cross section of current practices in computer modelling in the environmental sciences. Many of the topics are relevant to matters of topical public concern: global atmospheric effects and world climate, oceanographic phenomena and coastal flooding, pollution dispersal and acid rain. *Physics Briefs*, 1988

The emphasis is on applications of parallel computing. In addition to papers discussing the development of new algorithms for and applications of various types of parallel computers, an overview of the newest developments regarding parallel computer hardware and software is given. *Index of Conference Proceedings* British Library.
