Multivalued Analysis And Nonlinear Programming Problems With Perturbations:

Multivalued Analysis and Nonlinear Programming Problems with Perturbations Bernd Luderer, Leonid Minchenko, Tatyana Satsura, 2002-12-31 The book presents a treatment of topological and differential properties of multivalued mappings and marginal functions. In addition, applications to sensitivity analysis of nonlinear programming problems under perturbations are studied. Properties of marginal functions associated with optimization problems are analyzed under quite general constraints defined by means of multivalued mappings. A unified approach to directional differentiability of functions and multifunctions forms the base of the volume. Nonlinear programming problems involving quasidifferentiable functions are considered as well. A significant part of the results are based on theories and concepts of two former Soviet Union researchers Demyanov and Rubinov and have never been published in English before. It contains all the necessary information from multivalued analysis and does not require special knowledge but assumes basic knowledge of calculus at an undergraduate level.

Perturbation Analysis of Optimization Problems J. Frederic Bonnans, Alexander Shapiro, 2013-11-22 The main subject of this book is perturbation analysis of continuous optimization problems. In the last two decades considerable progress has been made in that area and it seems that it is time now to present a synthetic view of many important results that apply to various classes of problems. The model problem that is considered throughout the book is of the form $P: \text{Min } x \text{ subject to } G(x) \in K$ where $x \in X$ and Y are Banach spaces, K is a closed convex subset of Y and $X \subseteq \mathbb{R}^n$ and $G: X \rightarrow 2^Y$ are called the objective function and the constraint mapping respectively. We also consider a parameterized version P of the above problem where the objective function $x \mapsto u(x)$ and the constraint mapping $G(x, u)$ are parameterized by a vector u varying in a Banach space U . Our aim is to study continuity and differentiability properties of the optimal value $v(u)$ and the set $S(u)$ of optimal solutions of P viewed as functions of the parameter vector u .

Nonsmooth Analysis Winfried Schirotzek, 2007-06-11 This book treats various concepts of generalized derivatives and subdifferentials in normed spaces, their geometric counterparts and their application to optimization problems. It starts with the subdifferential of convex analysis and passes to corresponding concepts for locally Lipschitz continuous functions and then presents subdifferentials for general lower semicontinuous functions. All basic tools are presented where they are needed. This concerns separation theorems, variational and extremal principles as well as relevant parts of multifunction theory. Each chapter ends with bibliographic notes and exercises.

Mathematical Programming with Data Perturbations Anthony V. Fiacco, 1997-09-19 Presents research contributions and tutorial expositions on current methodologies for sensitivity, stability and approximation analyses of mathematical programming and related problem structures involving parameters. The text features up to date findings on important topics covering such areas as the effect of perturbations on the performance of algorithms, approximation techniques for optimal control problems and global error bounds for convex inequalities.

S. Levitin,1994-09-06 Presents the author's research of local parametric optimization in the finite dimensional case This book provides a clear and complete formulation of the main perturbation theory problems for finite dimensional optimization as well as new mathematical methods to analyze these problems Using a unified approach the author has developed a general perturbation theory for finite dimensional extremum problems Within the framework of this theory methods for studying perturbed problems in zero first and second order approximations have been developed
