Abstract State Machines 2004. Advances in Theory and Practice Wolf Zimmermann, Bernhard Thalheim, 2004-05-11 This book constitutes the refereed proceedings of the 11th International Workshop on Abstract State Machines ASM 2004 held in Lutherstadt Wittenberg Germany in May 2004 The 12 revised full research papers presented together with 4 invited papers were carefully reviewed and selected for inclusion in the book The papers reflect state of the art research and development of the abstract state machine method for the design and analysis of complex software and hardware systems Besides theoretical results and methodological progress applications in various fields are studied as well High Performance Embedded Computing Luis Miguel Pinho, Eduardo Quinones, Marko Bertogna, 2022-09-01 Nowadays the prevalence of computing systems in our lives is so ubiquitous that we live in a cyber physical world dominated by computer systems from pacemakers to cars and airplanes These systems demand for more computational performance to process large amounts of data from multiple data sources with guaranteed processing times Actuating outside of the required timing bounds may cause the failure of the system being vital for systems like planes cars business monitoring e trading etc High Performance and Time Predictable Embedded Computing presents recent advances in software architecture and tools to support such complex systems enabling the design of embedded computing devices which are able to deliver high performance whilst guaranteeing the application required timing bounds Technical topics discussed in the book include Parallel embedded platforms Programming models Mapping and scheduling of parallel computations Timing and schedulability analysis Runtimes and operating systems The work reflected in this book was done in the scope of the European project P SOCRATES funded under the FP7 framework program of the European Commission High performance and time predictable embedded computing is ideal for personnel in computer communication embedded industries as well as academic staff and master research students in computer science embedded systems cyber physical systems and internet of things *Euro-Par 2007 Parallel Processing* Anne-Marie Kermarrec, 2007-08-14 This book constitutes the refereed proceedings of the 13th International Conference on Parallel Computing Euro Par 2007 held in Dresden Rennes France August 28 31 2007 The 89 revised papers presented were carefully reviewed and selected from 333 submissions The papers are organized in topical sections on support tools and environments performance prediction and evaluation scheduling and load balancing compilers for high performance parallel and distributed databases grid and cluster computing peer to peer computing distributed systems and algorithms parallel and distributed programming parallel numerical algorithms distributed and high performance multimedia theory and algorithms for parallel computation high performance networks mobile and ubiquitous computing *Proceedings of the ... Sadri,2003-08-02 Alan Robinson This set of essays pays tribute to Bob Kowalski on his 60th birthday an anniversary which gives his friends and colleagues an excuse to celebrate his career as an original thinker a charismatic communicator and a forceful intellectual leader The logic programming community hereby and herein conveys its respect and thanks to him for his pivotal role in creating and fostering the conceptual paradigm which is its raison d tre The diversity of interests covered here reflects the variety of Bob s concerns Read on It is an intellectual feast Before you begin permit me to send him a brief personal but public message Bob how right you were and how wrong I was I should explain When Bob arrived in Edinburgh in 1967 resolution was as yet fairly new having taken several years to become at all widely known Research groups to investigate various aspects of resolution sprang up at several institutions the one organized by Bernard Meltzer at Edinburgh University being among the first For the half dozen years that Bob was a leading member of Bernard s group I was a frequent visitor to it and I saw a lot of him We had many discussions about logic computation and language The C++ Report ,1999 **Euro-Par 2008 Parallel Processing** Emilio Luque,Tomas Margalef,Domingo Benítez,2008-08-11 This book constitutes the refereed proceedings of the 14th International Conference on Parallel Computing Euro Par 2008 held in Las Palmas de Gran Canaria Spain in August 2008 The 86 revised papers presented were carefully reviewed and selected from 264 submissions The papers are organized in topical sections on support tools and environments performance prediction and evaluation scheduling and load balancing high performance architectures and compilers parallel and distributed databases grid and cluster computing peer to peer computing distributed systems and algorithms parallel and distributed programming parallel numerical algorithms distributed and high performance multimedia theory and algorithms for parallel computation and high performance networks **Computer Language** ,1991 **Abstract State Machines** ,2004 Journal of Object-oriented Programming ,1996 **Dr. Dobb's Journal** ,1999-07 *Index to IEEE Publications* Institute of Electrical and Electronics Engineers,1997 *Applying Mobile Code to Distributed Systems* David A. Halls,1997 Abstract Use of mobile code can make distributed systems and the abstractions they provide more flexible to build and use Richer functionality can be given to the interaction between processes by allowing code to be sent between them More convenient application level operations can be made over a network By making higher order language features transmissible distributed components can be tightly bound together when they communicate At the same time familiar distributed systems can be built using mobile code Mobile code can make distributed systems adaptable to application needs Rather than fixing the interface to a resource and the pattern of interaction with it a minimal interface can be defined and code implementing higher level interfaces placed alongside it as and when required These higher level interfaces can be application specific allowing for interaction patterns that were unknown at the time the resource was made available Sending code close to a resource can also reduce network usage

because the point of interaction with it moves The combination of document markup supporting hypertext and a language supporting state saving allows for stateful client server sessions with stateless servers and lightweight clients Putting dormant mobile code in documents provides an alternative to holding knowledge of application functionality on a server machine or running arbitrary code on a client machine Mobile code helps to support user mobility Personalised environments that support state saving can follow a user between computers Heterogeneous state saving allows a user s programs to be relocated between computers By using a mobile code system with language support for state saving applications can direct arbitrary component migration without priming program servers with specific support In summary this dissertation supports the thesis that mobile code can be used to enhance distributed systems
