Multidimensional Programming:

Multidimensional Programming Edward A. Ashcroft, 1995 This book describes a powerful language for multidimensional declarative programming called Lucid. Lucid has evolved considerably in the past ten years. The main catalyst for this metamorphosis was the discovery that Lucid is based on intensional logic, one commonly used in studying natural languages. Intensionality and more specifically indexicality has enabled Lucid to implicitly express multidimensional objects that change a fundamental capability with several consequences which are explored in this book. The author covers a broad range of topics from foundations to applications and from implementations to implications. The role of intensional logic in Lucid as well as its consequences for programming in general is discussed. The syntax and mathematical semantics of the language are given and its ability to be used as a formal system for transformation and verification is presented. The use of Lucid in both multidimensional applications programming and software systems construction such as a parallel programming system and a visual programming system is described. A novel model of multidimensional computation education is described along with its serendipitous practical benefits for harnessing parallelism and tolerating faults. As the only volume that reflects the advances over the past decade, this work will be of great interest to researchers and advanced students involved with declarative language systems and programming.

Encyclopedia of Optimization Christodoulos A. Floudas, Panos M. Pardalos, 2008-09-04 The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research, the richness of ideas, and the breadth of applications that has come from this field. The second edition builds on the success of the former edition with more than 150 completely new entries designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced. Particularly heavy attention resulted in health science and transportation with entries such as Algorithms for Genomics, Optimization and Radiotherapy Treatment Design, and Crew Scheduling.

Organizations: Multiple Agents with Multiple Criteria J.N. Morse,2012-12-06 The Fourth International MCDM Conference follows a tradition that began with an exploratory gathering at the University of South Carolina in 1973 The First International Conference was held in Jouy en Josas in 1975 The second and third were held in Buffalo 1977 and KOnigswinter 1979 We are grateful to the Office of Naval Research for years of advice and funding and to Springer Verlag for providing a widely dispersed series of proceedings volumes In the case of the Delaware Conference we gratefully acknowledge new support from the corporate sector coordinated by the University of Delaware s Development Office Now that I have attended to the formal recognitions I wish to place my recollection of the human side of the conference into the record This is justifiable because multiple criteria problem solving has been nurtured by a close knit group of people whose interactions are not fully captured by the standard journal format This was the conference in which an animated discussion between Dave Bell and Paul Schoemaker caused Mathilde Stephenson to stand up and say Don t stop it this is the best part of the conference Another sort of moment occurred when Lucas Pun was asked to explain a certain Chinese character in one of his transparencies He replied No alcohol allowed From Erick Duesing speaking with an historical perspective we had the insight that multiple criteria methods languished because McCarthyism had made planning suspect
