Design research in software development: Constructing and Linking Research

Questions, Objectives, Methods and Outcomes (UUM Press) Norshuhada Shiratuddin ,Shahizan Hassan,2010-01-01

Design research is grounded on the iterative Triangulation Methodology ITM where theoretical development and empirical research approaches are triangulated to accomplish the design research objectives Constructing and associating research gaps questions objectives methods and outcomes are imperative in a research However not linking all these and choosing the wrong and poorly designed methods are common especially among inexperienced researchers and students Therefore researchers should practice strategies in identifying the right methods to collect data or perform experiment that can meet the predefined objectives and determined research problems This book is aimed at providing some of the likely strategies It contains personalized strategies and examples that are useful for starting a design research in any field particularly in software and application development The examples described are real studies that we conducted together with our research team members
