## **Multimedia Introduction To Programming Using Java:**

*Multimedia Introduction to Programming Using Java* David Gries, Paul Gries, 2005-11-30 Although vital to modern software development Java and object oriented programming can pose significant challenges to newcomers. This text is unique in both scope and approach and is accompanied by interactive content that you may find on extras.springer.com. Addresses the learning curve by providing a careful classroom tested presentation of Java from the fundamentals of variables, types and expressions to procedural concepts like loops and sophisticated object oriented ideas. *Multimedia Introduction to Programming Using Java* anchors its pedagogy in the program ProgramLive that you may find at extras.springer.com. A complete multimedia module in itself, containing over 250 recorded lectures with synchronized animation. ProgramLive allows users to see first hand and in real time processes like stepwise refinement of algorithms, development of loops, execution of method calls and associated changes to the call stack and much more. The zip file also includes all programs from the book, 35 guided instruction sets for closed lab sessions and a 70 page hyperlinked glossary. Additional key features of this work: Provides clear and accessible treatment of all aspects of a first course along with more advanced topics such as recursion, exceptions, interfaces, inner classes and GUIs. Introduces objects and classes early in the exposition, rendering object oriented programming intuitive and natural. Develops programs rather than simply showcasing them. Supports all concepts through complementary lectures on the zip file featured on extras.springer.com. Contains numerous self help exercises that encourage readers to practice programming. Emphasizes rigor and accuracy through user friendly exposition and a flexible organizational style. With its comprehensive appendices and bibliography, systematic approach and helpful interactive programs on extras.springer.com, this exciting work provides the key tools they needed for successful object oriented programming. It is ideal for use at the undergraduate and graduate beginning level, whether in the classroom or for distance learning. Furthermore, the text will also be a valuable self study resource or reference volume in any programmer's library.

Mark Guzdial and Barb Ericson have a most effective method for teaching computing and Java programming in a context that readers find interesting: manipulating digital media. The authors use these multimedia applications to teach critical programming skills and principles like how to design and use algorithms and practical software engineering methods all in the context of learning how to program in Java. Mark and Barb also demonstrate how to communicate compatibly through networks and do concurrent programming. The book also includes optional coverage of rudimentary data structures and databases using Java and comes with a CD ROM containing all the code files referenced in the text and required for media manipulation. Allows readers to use their own media such as personal sound or picture files.
