Multimedia Modeling (Mmm'97): Modeling Multimedia Information And Systems Hung Keng Pung, Tat Seng Chua, 1997-11-12 The world is inherently complex and multimedia in nature The development of computer systems to tackle real world problems is an extremely difficult task As computers capable of manipulating multimedia information are becoming more powerful and commonplace larger and more complex systems are increasingly being built To fully comprehend the complexity of such undertakings proper modeling of multimedia information and systems must be carried out A model provides a high level abstraction of the system in which the implementation is based upon It permits the desirable properties of the system to be extracted and analyzed and also provides a uniform framework for integration between different systems and for interactions between the system and human users This volume is devoted to the discussion of effective modeling of multimedia information and systems for a wide range of applications It aims to provide common modeling frameworks for the integration of the diverse subjects in the field of multimedia information Multimedia Modeling, Modeling Multimedia Information And Systems - Proceedings Of The First International Workshop Ahmed Karmouch, 1999-09-24 Multimedia systems result from the merging of the computing communications and broadcasting industries This merging has been made possible today by the technical advances in high speed broadband networks computer desktop workstations and information storage and compression techniques Currently text and image are the predominant forms of information exchanged over the Internet However there are clear signs that the situation is rapidly changing with the recent emergence of multimedia applications in the area of education business e commerce and entertainment resulting therefore in increased consumption of network bandwidth and in the creation of a very large volume of information that needs to be processed and stored This trend has made strong demands on the multimedia modeling research community to develop new semantic models that will further facilitate the creation representation manipulation and animation of multimedia content with a better level of granularity than what is possible to achieve with today s multimedia information systems This volume explores issues associated with multimedia modeling information and systems and presents the current status of work in this field It covers a broad range of theoretical conceptual and practical topics and addresses the needs of a wide audience including researchers multimedia systems designers and users of multimedia systems

Multimedia Modeling (Mmm'97). M. Mahmoud, 1997 *Multimedia Modeling* Sh?ji Hashimoto, 2000 Since the beginning of human history we have had a communication network that is identical with the physical distribution network In the late 19th century we established the energy network to distribute electric and thermal energy launching the modern society The analog communication network became popular in the middle of the 20th century And now at the end of the 20th century we have global digital information networks Along with the advancement of the communication network the progress of the information processing technology can be classified into three historical phases The first phase technology is physical

information processing treating physical data from the real world This technology is often called signal processing and is based on the physical law of nature The second phase is free from the physical constraints It is logical information processing dealing with knowledge and rules The most important aspect of this phase is consistency Provable is employed to confirm the reality of the system Based on the advanced computer and network technology we are entering the third phase of information processing which is Kansei information processing Kansei is a Japanese word expressing some subjective ability referred to as sensibility intuition affection or emotion Emotional resonance or consent is important in the pursuit of reality in this phase Multimedia modeling to harmonize different media and systems is one of the key technologies in the third phase of information processing It will provide a next generation framework to construct a human centered information environment that is more comfortable and more productive This volume is devoted to a discussion on effective modeling of multimedia information and systems for a wide range of applications It contains 30 technical articles all of which were selected after vigorous peer reviews for presentation at the International Conference on Multimedia Modeling held in Nagano Japan on 13 15 November 2000 Multimedia Modeling - Modeling Multimedia Information & Systems (Mmm 2000) Shuji Hashimoto, 2000-10-27 Since the beginning of human history we have had a communication network that is identical with the physical distribution network In the late 19th century we established the energy network to distribute electric and thermal energy launching the modern society The analog communication network became popular in the middle of the 20th century And now at the end of the 20th century we have global digital information networks Along with the advancement of the communication network the progress of the information processing technology can be classified into three historical phases The first phase technology is physical information processing treating physical data from the real world This technology is often called signal processing and is based on the physical law of nature The second phase is free from the physical constraints It is logical information processing dealing with knowledge and rules The most important aspect of this phase is consistency Provable is employed to confirm the reality of the system Based on the advanced computer and network technology we are entering the third phase of information processing which is Kansei information processing Kansei is a Japanese word expressing some subjective ability referred to as sensibility intuition affection or emotion Emotional resonance or consent is important in the pursuit of reality in this phase Multimedia modeling to harmonize different media and systems is one of the key technologies in the third phase of information processing It will provide a next generation framework to construct a human centered information environment that is more comfortable and more productive This volume is devoted to a discussion on effective modeling of multimedia information and systems for a wide range of applications It contains 30 technical articles all of which were selected after vigorous peer reviews for presentation at the International Conference on Multimedia Modeling held in Nagano Japan on 13 15 November 2000 **Multimedia Modeling**, 1997 **Multimedia Modeling** Hung Keng Pung, Tat-Seng Chua, 1997-01-01 The world is inherently complex
