Introduction to Multiphase Flow George Yadigaroglu, Geoffrey F. Hewitt, 2017-08-19 This book is the maiden volume in a new series devoted to lectures delivered through the annual seminars Short Courses on Multiphase Flow held primarily at ETH Zurich continuously since 1984. The Zurich short courses presented by prominent specialists in the various topics covered have attracted a very large number of participants. This series presents fully updated and when necessary re grouped lectures in a number of topical volumes. The collection aims at giving a condensed critical and up to date view of basic knowledge on multiphase flows in relation to systems and phenomena encountered in industrial applications. The present volume covers the background of Multiphase Flows MPF that introduces the reader to the particular nature and complexity of multiphase flows and to basic but critical aspects of MPFs including concepts and the definition of the quantities of interest an introduction to modelling strategies for MPFs flow regimes flow regime maps and transition criteria. It also deals with the ubiquitous needs of the multiphase flow modeller namely pressure drop and phase distribution i.e. the void fraction and the topology of the phases that determines the flow regimes.

**Computational Methods in Multiphase Flow IV** A.A. Mammoli, C.A. Brebbia, 2007-05-11. Fluid Dynamics is one of the most important topics of applied mathematics and physics. Together with complex flows and turbulence, multiphase flows remains one of the most challenging areas of computational mechanics and even seemingly simple problems remain unsolved to date. Multiphase flows are found in all areas of technology at all length scales and flow regimes. The fluids involved can be compressible or incompressible, linear or nonlinear. Because of the complexity of the problem, it is often essential to utilize advanced computational and experimental methods to solve the complex equations that describe them. Challenges in these

simulations include nonlinear fluids treating drop breakup and coalescence characterizing phase structures and many others This volume brings together work presented at the Fourth International Conference on Computational and Experimental Methods in Multiphase and Complex Flows Featured topics include Suspensions Bubble and Drop Dynamics Flow in Porous Media Interfaces Turbulent Flow Injectors and Nozzles Particle Image Velocimetry Macroscale Constitutive Models Large Eddy Simulation Finite Volumes Interface Tracking Methods Biological Flows Environmental Multiphase Flow Phase Changes and Stochastic Modelling
