Multiple Criteria Decision Support In Engineering Design:

Multiple Criteria Decision Support in Engineering Design Pratyush Sen, Jian-Bo Yang, 2012-12-06 Multiple Criteria Decision Support in Engineering Design examines some of the underlying issues and related modelling strategies with a view to exploring the rich potential of a generalised multiple criteria approach to design decision making The arguments are supported by numerical examples It can be argued that within the classic monocriterion paradigm the optimal solution is inarguably identified once the feasible alternatives are established and an objective function agreed on It is only when conflict resolution is involved that decision making truly becomes important and many design situations exist where stated functional requirements may be in actual or potential conflict The most preferred solution under such circumstances depends on the designer s or decision maker s priorities so that the chosen solution is based on a combination of technical possibilities and designer preferences This book addresses the key concepts in multiple criteria decision making and provides valuable insight into how such problems arise and can be solved in the area of decision making in general and in the domain of engineering design in particular

Multi-criteria Decision Analysis for Supporting the Selection of Engineering Materials in Product Design Ali Jahan, Kevin L Edwards, Marjan Bahraminasab, 2016-02-17 Multi criteria Decision Analysis for Supporting the Selection of Engineering Materials in Product Design Second Edition provides readers with tactics they can use to optimally select materials to satisfy complex design problems when they are faced with the vast range of materials available Current approaches to materials selection range from the use of intuition and experience to more formalized computer based methods such as electronic databases with search engines to facilitate the materials selection process Recently multi criteria decision making MCDM methods have been applied to materials selection demonstrating significant capability for tackling complex design problems This book describes the rapidly growing field of MCDM and its application to materials selection It aids readers in producing successful designs by improving the decision making process This new edition updates and expands previous key topics including new chapters on materials selection in the context of design problem solving and multiple objective decision making also presenting a significant amount of additional case studies that will aid in the learning process Describes the advantages of Quality Function Deployment QFD in the materials selection process through different case studies Presents a methodology for multi objective material design optimization that employs Design of Experiments coupled with Finite Element Analysis Supplements existing quantitative methods of materials selection by allowing simultaneous consideration of design attributes component configurations and types of material Provides a case study for simultaneous materials selection and geometrical optimization processes
