Multiple View Geometry In Computer Vision:

Multiple View Geometry in Computer Vision Richard Hartley, Andrew Zisserman, 2003 A basic problem in computer vision is to understand the structure of a real world scene given several images of it. Techniques for solving this problem are taken from projective geometry and photogrammetry. Here the authors cover the geometric principles and their algebraic representation in terms of camera projection matrices, the fundamental matrix and the trifocal tensor. The theory and methods of computation of these entities are discussed with real examples as is their use in the reconstruction of scenes from multiple images. The new edition features an extended introduction covering the key ideas in the book which itself has been updated with additional examples and appendices and significant new results which have appeared since the first edition. Comprehensive background material is provided so readers familiar with linear algebra and basic numerical methods can understand the projective geometry and estimation algorithms presented and implement the algorithms directly from the book.

MEMS Technology for Biomedical Imaging Applications Qifa Zhou, Yi Zhang, 2019-10-23 Biomedical imaging is the key technique and process to create informative images of the human body or other organic structures for clinical purposes or medical science. Micro electro mechanical systems MEMS technology has demonstrated enormous potential in biomedical imaging applications due to its outstanding advantages of for instance miniaturization, high speed, higher resolution and convenience of batch fabrication. There are many advancements and breakthroughs developing in the academic community and there are a few challenges raised accordingly upon the designs, structures, fabrication, integration and applications of MEMS for all kinds of biomedical imaging. This Special Issue aims to collate and showcase research papers, short communications, perspectives and insightful review articles from esteemed colleagues that demonstrate 1 original works on the topic of MEMS components or devices based on various kinds of mechanisms for biomedical imaging and 2 new developments and potentials of applying MEMS technology of any kind in biomedical imaging. The objective of this special session is to provide insightful information regarding the technological advancements for the researchers in the community.
