of everyday life Starting from these scenarios we present a series of technology roadmaps associated research development innovation challenges and recommendations for Europe to exploit the opportunities offered by the next generation of computing Seven scenarios were carefully developed to address critical aspects of society and economy Describing how computing will evolve in each of the scenarios has allowed us to describe a series of technology needs that by considering Europe OCLCbr D0 s current strengths and weaknesses in computing we could translate into research and innovation challenges for Europe and into value creation opportunities for the European industry
