Neyman From Life:

Neyman Constance Reid, 1982-12 Jerzy Neyman received the National Medal of Science for laying the foundations of modern statistics and devising tests and procedures that have become essential parts of the knowledge of every statistician. Until his death in 1981 at the age of 87, Neyman was vigorously involved in the concerns and controversies of the day, a scientist whose personality and activity were integral parts of his contribution to science. His career is thus particularly well suited for the non-technical life story which Constance Reid has made her own in such well-received biographies of Hilbert and Courant. She was able to talk extensively with Neyman and have access to his personal and professional letters and papers. Her book will thus appeal to professional statisticians as well as amateurs wanting to learn about a subject which permeates almost every aspect of modern life.

Neyman Constance Reid, 2013-12-01 This book is the result of a suggestion made to me by Erich Lehmann of the Department of Statistics of the University of California at Berkeley. Throughout the writing of it, I have enjoyed his assistance and companionship and that of his wife Juliet Shaffer. In the beginning, writing about a man like Neyman who was alive and still very active, I planned to limit myself to his recollections and records and to my personal observations of him during his eighty-fifth year. It soon became apparent, however, that I would need to supplement these with the recollections of his colleagues and former students. With his consent, I consulted them. I am most grateful for the time and effort which so many people expended in talking and writing to me. I would like to mention especially the assistance I received from Lucien Le Cam and Elizabeth Scott and the very friendly cooperation of Egon S. Pearson. Without the latter's careful preservation of Neyman's early letters, I would have found it impossible to write in any detail of the years from 1926 to 1938. A number of libraries and archives also provided valuable material. These included the Bancroft Library and the various administrative archives of the University of California, the D. M. S. Watson Library at University College, the National Archives, and the Rockefeller Foundation Archives. The careful work of Kay Kewley, who was responsible for the organization of the Neyman papers, made my own work much easier.

Selected Works of E. L. Lehmann Javier Rojo, 2012-01-14 These volumes present a selection of Erich L. Lehmann's monumental contributions to statistics. These works are multifaceted. His early work included fundamental contributions to hypothesis testing, theory of point estimation, and more generally to decision theory. His work in Nonparametric Statistics was groundbreaking. His fundamental contributions in this area include results that came to assuage the anxiety of statisticians that were skeptical of nonparametric methodologies, and his work on concepts of dependence has created a large literature. The two volumes are divided into chapters of related works. Invited contributors have critiqued the papers in each chapter, and the reprinted group of papers follows each commentary. A complete bibliography that contains links to recorded talks by Erich Lehmann, and which are freely accessible to the public, and a list of Ph.D. students are also included. These volumes belong in every statistician's personal collection and are a required holding for any institutional library.

Selected Works of David

Brillinger Peter Guttorp, David Brillinger, 2013-04-10 This volume contains 30 of David Brillinger's most influential papers. He is an eminent statistical scientist having published broadly in time series and point process analysis, seismology, neurophysiology and population biology. Each of these areas are well represented in the book. The volume has been divided into four parts, each with comments by one of Dr Brillinger's former PhD students. His more theoretical papers have comments by Victor Panaretos from Switzerland. The area of time series has commentary by Pedro Morettin from Brazil. The biologically oriented papers are commented by Tore Schweder from Norway and Haiganoush Preisler from USA, while the point process papers have comments by Peter Guttorp from USA. In addition, the volume contains a Statistical Science interview with Dr Brillinger and his bibliography.

Reminiscences of a Statistician Erich L. Lehmann, 2007-12-26 This relatively nontechnical book is the first account of the history of statistics from the Fisher revolution to the computer revolution. It sketches the careers and highlights some of the work of 65 people, most of them statisticians. What gives the book its special character is its emphasis on the author's interaction with these people and the inclusion of many personal anecdotes. Combined, these portraits provide an amazing fly on the wall view of statistics during the period in question. The stress is on ideas and technical material is held to a minimum. Thus, the book is accessible to anyone with at least an elementary background in statistics.

Statistics, Probability, and Game Theory David Blackwell, Thomas Shelburne Ferguson, Lloyd S. Shapley, James B. MacQueen, 1996 Most of the 26 papers are research reports on probability, statistics, gambling, game theory, Markov decision processes, set theory and logic. But they also include reviews on comparing experiments, games of timing, merging opinions, associated memory models and SPLIF's historical views of Carnap, von Mises and the Berkeley Statistics Department, and a brief history, appreciation and bibliography of Berkeley professor Blackwell. A sampling of titles turns up: The Hamiltonian Cycle Problem and Singularly Perturbed Markov Decision Process; A Pathwise Approach to Dynkin Games; The Redistribution of Velocity Collision and Transformations; Casino Winnings at Blackjack and Randomness and the Foundations of Probability. No index. Annotation copyrighted by Book News, Inc., Portland, OR.

Biographies of Scientists for Sci-Tech Libraries Tony Stankus, 2019-12-05 This book, first published in 1991, is an invaluable guide to biographies of scientists from a wide variety of scientific fields. The books selected for this highly descriptive bibliography help librarians shatter readers' stereotypes of scientists as monomaniacal and uninteresting people by providing interesting and provocative titles to capture the interest of students and other readers. The biographies included in this very special bibliography were carefully selected for their humour and human insights to give future scientists encouragement, inspiration and an understanding of the origins of particular scientific fields. These biographies are unique in that they explore the whole personality of the scientist, giving students a glimpse at the variety and drama of the lives beyond well-known contributions or Nobel prize accomplishments.
