Niche Construction The Neglected Process In Evolution:

Niche Construction F. John Odling-Smee, Kevin N. Lala, Marcus Feldman, 2013-02-15 The seemingly innocent observation that the activities of organisms bring about changes in environments is so obvious that it seems an unlikely focus for a new line of thinking about evolution. Yet niche construction as this process of organism driven environmental modification is known to have hidden complexities. By transforming biotic and abiotic sources of natural selection in external environments, niche construction generates feedback in evolution on a scale hitherto underestimated and in a manner that transforms the evolutionary dynamic. It also plays a critical role in ecology supporting ecosystem engineering and influencing the flow of energy and nutrients through ecosystems. Despite this, niche construction has been given short shrift in theoretical biology in part because it cannot be fully understood within the framework of standard evolutionary theory. Wedding evolution and ecology, this book extends evolutionary theory by formally including niche construction and ecological inheritance as additional evolutionary processes. The authors support their historic move with empirical data, theoretical population genetics, and conceptual models. They also describe new research methods capable of testing the theory. They demonstrate how their theory can resolve long standing problems in ecology, particularly by advancing the sorely needed synthesis of ecology and evolution and how it offers an evolutionary basis for the human sciences. Already hailed as a pioneering work by some of the world's most influential biologists, this is a rare potentially field changing contribution to the biological sciences.

Niche Construction John Odling-Smee, 2024-09-03 How niche construction theory extends evolutionary theory beyond natural selection to a more general theory about the coevolution of organisms with their environments. In *Niche Construction*, John Odling-Smee, the leading authority on niche construction theory, extends evolutionary theory from an explanation of how populations of organisms respond to natural selection pressures in their environments to a more general theory about the coevolution of organisms with their environments. Odling-Smee shows how organisms cause changes in their local external environments by interacting with them, thereby contributing in fundamental ways to their own and one another's evolution. This book applies niche construction theory to current problems such as human-induced global warming and suggests how humans might contribute positively to the future evolution of life on Earth. Odling-Smee explains how orthodox evolutionary theory falls short in two ways. First, it does not describe how organisms contribute to their own and one another's evolution through their environment-changing niche constructing activities. Second, it fails to explain how genetic evolution can give rise to supplementary knowledge-gaining processes in many species. These include certain developmental processes in individual organisms and socio-cultural processes in animals, including humans. Neo-Darwinism, the author writes, assesses the fitness of individual organisms in populations in terms of their capacity to survive and reproduce but without attributing these capacities to the active, purposeful agency of organisms. He argues that the purposeful agency of individual organisms plays a central role in evolution. He also discusses the relationship of an organism

Evolutionary Causation Tobias Uller,Kevin N. Lala,2019-09-03 A comprehensive treatment of the concept of causation in evolutionary biology that makes clear its central role in both historical and contemporary debates Most scientific explanations are causal This is certainly the case in evolutionary biology which seeks to explain the diversity of life and the adaptive fit between organisms and their surroundings The nature of causation in evolutionary biology however is contentious How causation is understood shapes the structure of evolutionary theory and historical and contemporary debates in evolutionary biology have revolved around the nature of causation Despite its centrality and differing views on the subject the major conceptual issues regarding the nature of causation in evolutionary biology are rarely addressed This volume fills the gap bringing together biologists and philosophers to offer a comprehensive interdisciplinary treatment of evolutionary causation Contributors first address biological motivations for rethinking evolutionary causation considering the ways in which development extra genetic inheritance and niche construction challenge notions of cause and process in evolution and describing how alternative representations of evolutionary causation can shed light on a range of evolutionary problems Contributors then analyze evolutionary causation from a philosophical perspective considering such topics as causal entanglement the commingling of organism and environment and the relationship between causation and information Contributors John A Baker Lynn Chiu David I Dayan Ren e A Duckworth Marcus W Feldman Susan A Foster Melissa A Graham Heikki Helanter Kevin N Lala Armin P Moczek John Odling Smee Jun Otsuka Massimo Pigliucci Arnaud Pocheville Arlin Stoltzfus Karola Stotz Sonia E Sultan Christoph Thies Tobias Uller Denis M Walsh Richard A Watson Human Origins and the Image of God Lilley & Pedersen, eds.,2017 How did human beings originate What if anything makes us unique These questions have long been central to philosophers theologians and scientists This book continues that robust interdisciplinary conversation with contributions from an international team of scholars whose expertise ranges from biology and anthropology to philosophical theology and ethics The fourteen chapters in this volume are organized around Wentzel van Huyssteen s pioneering work in human rationality embodiment and evolutionary history Bringing a variety of diverse perspectives to bear on a hotly debated issue Human Origins and the Image of God showcases new research by some of today s finest scholars working on questions regarding human origins and human uniqueness **Oxford Handbook of**

Cycles of Contingency Susan Oyama, Russell D. Gray, Paul E. Griffiths, 2003-01-24 The nature-nurture debate is not dead. Dichotomous views of development still underlie many fundamental debates in the biological and social sciences. Developmental systems theory (DST) offers a new conceptual framework with which to resolve such debates. DST views ontogeny as contingent cycles of interaction among a varied set of developmental resources, no one of which controls the process. These factors include DNA, cellular and organismic structure, and social and ecological interactions. DST has excited interest from a wide range of researchers from molecular biologists to anthropologists because of its ability to integrate evolutionary theory and other disciplines without falling into traditional oppositions. The book provides historical background to DST, recent theoretical findings on the mechanisms of heredity, applications of the DST framework to behavioral development, implications of DST for the philosophy of biology, and critical reactions to DST.

Organization in Biology Matteo Mossio, 2023-11-10 This open access book assesses the prospects of re-adopting organization as a pivotal concept in biology. It shows how organization can nourish biological thinking and practice by reconnecting with the idea of biology as the science of organized systems. The book provides a comprehensive state-of-the-art picture of the characterizations and uses of the concept of organization in both biological science and philosophy of biology. It also deals with a variety of themes including evolution, organogenesis, heredity, cognition, and ecology, with respect to which the concept of organization can guide the elaboration of original models and new experimental protocols. It will be of interest to biologists and scholars working in philosophy of science alike.

The Bulletin, 2004 *The American Naturalist*, 2009 Current Issues in Theoretical Philosophy Richard Schantz, 2004 Evolution of Communicative Flexibility D. Kimbrough Oller, Ulrike Griebel, 2008 Experts investigate communicative flexibility in both form and usage of signals as the foundation of the evolution of complex communication systems including human language. The evolutionary roots of human communication are difficult to trace but recent comparative research suggests that the first key step in that evolutionary history may have been the establishment of basic communicative flexibility: the ability to vocalize freely combined with the capability to coordinate vocalization with communicative intent. The contributors to this volume investigate how some species, particularly ancient hominids, broke free of the constraints of fixed signals/actions that were evolved to communicate but lack the flexibility of language. A newborn infant's cry, for example, always signals distress and has a stereotypical form not modifiable by the crying baby. Fundamentally, the contributors ask what communicative flexibility is and what evolutionary conditions can produce it. The accounts offered in these chapters are notable for taking the question of language origins farther back in evolutionary time than in much previous work. Many contributors address the very earliest communicative break of the hominid line from

the primate background others examine the evolutionary origins of flexibility in for example birds and marine mammals The volume s interdisciplinary theoretical perspectives illuminate issues that are on the cutting edge of recent research on this topic Contributors Stphanie Barbu Curt Burgess Josep Call Laurance Doyle Julia Fischer Michael Goldstein Ulrike Griebel Kurt Hammerschmidt Sean Hanser Martine Hausberger Laurence Henry Allison Kaufman Stan Kuczaj Robert F Lachlan Brian MacWhinney Radhika Makecha Brenda McCowan D Kimbrough Oller Michael Owren Ron Schusterman Charles T Snowdon Kim Sterelny Beno t Test Gert Westermann *Ecology Research Progress* Sebastián I.
