time playlist engagement repeat tracks and even the times when a user is most likely to listen to a certain style of music This data is then processed to create a detailed profile of each user helping the platform predict which songs are most likely to appeal to them Practical example Imagine that you are a fan of pop music and frequently listen to the most popular tracks on the charts Spotify by noticing this pattern can recommend similar songs that are starting to gain popularity or even songs by emerging artists in the same style influencing your musical tastes before you have even heard of them *Streaming*
