Outside The Flock:

Mathematical Modeling in Agriculture Sabyasachi Pramanik, Niranjana Murthy M., Ankur Gupta, Ahmed J.

Obaid, 2024-10-16 The main goal of the book is to explore the idea behind data modeling in smart agriculture using information and communication technologies and tools to make agricultural practices more functional, fruitful and profitable. The research in the book looks at the likelihood and level of use of implemented technological components with regard to the adoption of different precision agricultural technologies. To identify the variables affecting farmers' choices to embrace more precise technology, zero-inflated Poisson and negative binomial count data regression models were utilized. Outcomes from the count data analysis of a random sample of various farm operators show that various aspects including farm dimension, farmer demographics, soil texture, urban impacts, farmer position of liabilities and position of the farm in a state were significantly associated with the approval, severity and likelihood of precision farming technologies. Farm management information systems (FMIS) have constantly advanced in complexity as they have incorporated new technology, the most recent of which is the internet. However, few FMIS have fully tapped into the internet's possibilities and the newly developing idea of precision agriculture receives little or no support in the FMIS that are now being sold. FMIS for precision agriculture must meet a few more criteria beyond those of regular FMIS, which increases the technological complexity of these systems. Deployment in a number of ways. In order to construct an FMIS that meet these extra needs, the authors here evaluated various cutting-edge web-based methods. The goal was to determine the requirements that precision agriculture placed on FMIS.

Behavioral Ecology of Tropical Birds Bridget J.M. Stutchbury, Eugene S. Morton, 2022-09-28 Behavioral Ecology of Tropical Birds, Second Edition, provides the most updated and comprehensive review on the evolution of behavior in tropical landbirds. The book reviews gaps in our knowledge that were identified twenty years ago when the first edition was published, highlights recent discoveries that have filled those gaps, and identifies new areas in urgent need of study. It covers key topics including timing of breeding, movement ecology, life history traits, slow vs. fast pace of life, mating systems, mate choice, territoriality, communication, biotic interactions, and conservation. Written by international experts on the behavior of tropical birds, the book explores why the tropics is a unique natural laboratory to study the evolution of bird behavior and why temperate zone species are so different. A recent surge of studies on tropical birds has helped to reduce the temperate zone bias that arose because most avian model species in behavioral ecology were adapted to northern temperate climates. This is an important resource for researchers, ecologists, and conservationists who want to understand the rich and complex evolutionary history of avian behavior. Includes examples from around the world. Provides a historical perspective on new knowledge in the past 20 years. Identifies knowledge gaps that have been filled along with new gaps that have emerged. Explores how avian behavior in the tropics is related to conservation.
