*An Overcrowded World?* Rob Bowden, 2002 Examines the facts about population growth its effects on the environment and considers what lies ahead      **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1973

**The Earth and I** Arthur Firstenberg, 2025-01-07 Almost all environmental books treat the environmental crisis as though humans are in charge of nature rather than part of it *The Earth and I* is the first book to put all preconceived notions aside and to ask na vely Who are we really What is our relationship to the earth How is it possible that we out of all the millions of species have come to destroy our common home The answers are surprising and have far reaching implications for those searching for solutions Part One tells what is happening to the earth s systems and how they are being destroyed It rewrites the two million year history of humanity s tenure on the earth as if we are part of nature and not separate from it and describes both the earth and the universe as living systems It paints a global coherent picture of the devastation to Earth s air water forests and creatures that is not found elsewhere It reviews assaults on these systems that are not treated adequately if at all elsewhere chemicals radiation plastics detergents biocides noise cars and guns Part Two Digging below the Surface asks why and enters territory not previously explored by environmentalists It describes the various ways to make a living on the earth hunting and gathering shifting agriculture nomadic herding settled agriculture and industrial technology as choices not eras choices coexisting with one another until today It rewrites economics It explores the relationship of warfare slavery religion and human sexuality to the environmental crisis And it is forced to conclude that these aspects of human culture are not only shaped but created by the technologies we use that the use of non human sources of energy interferes with human psychological development and that the unfulfilled urges within us explode in the violent technologies that are destroying our planet The solutions if it is not too late therefore lie in wise choice rather than wise use of our technologies      **Our Overcrowded World** Tadd Fisher, 1969      *The Micro Men* John Russell Fearn, Vargo
