Out On The Edge:

Watch Out for the Big Girls 3 J.M. Benjamin, 2017-05-30 Starrshma Fields is officially back on the scene with the intent of returning to the head of the Double Gs organization with a new game plan After a close call she is all too eager to put into motion the plan she conjured up while in custody at the Clark County Jail However she is clueless as to all that has been going on while she s been out of the loop Although she is still somewhat salty with her lover and leader Diamond Morgan has been handling business running the Double Gs in Starr s absence She has managed to repair the damage caused by some of Starr s recent decisions by making some better and stronger ones of her own but she is not sure if some things are beyond repair Queen Fem is uneasy behind the mess that her protege has brought to the doorstep of the organization that she founded It has been a long time since she has had to make a tough decision but she feels her hand is being forced She is unsure whether the Double Gs need to be under new leadership and whether Starr should step down Dealing with the illness of his only child and the strain it put on his marriage Agent McCarthy is back with a vengeance He throws himself into his work the only thing he loves as much as his family His only focus is to take down the Double Gs But with one of his plants now deceased and the other off the grid he is forced to roll up his sleeves to figure out how to dismember the Double Gs on his own Monica is caught between a rock and a hard place She is torn between the feelings she has built for Starrshma Fields her new love interest and her commitment to uphold the law With that and then some going on the Double Gs still operate on the highest level executing their missions to ensure that their grip on the corporate political and underworld remain firm New alliances are made and new orders are rendered If you re a major player in the Las Vegas area you still need to watch out for the big girls better known as the Double Gs *Everybody's Magazine* ,1915

The School Arts Book ,1909 **Shared-Memory Parallelism Can be Simple, Fast, and Scalable** Julian Shun, 2017-06-01 Parallelism is the key to achieving high performance in computing However writing efficient and scalable parallel programs is notoriously difficult and often requires significant expertise To address this challenge it is crucial to provide programmers with high level tools to enable them to develop solutions easily and at the same time emphasize the theoretical and practical aspects of algorithm design to allow the solutions developed to run efficiently under many different settings This thesis addresses this challenge using a three pronged approach consisting of the design of shared memory programming techniques frameworks and algorithms for important problems in computing The thesis provides evidence that with appropriate programming techniques frameworks and algorithms shared memory programs can be simple fast and scalable both in theory and in practice The results developed in this thesis serve to ease the transition into the multicore era The first part of this thesis introduces tools and techniques for deterministic parallel programming including means for encapsulating nondeterminism via powerful commutative building blocks as well as a novel framework for executing sequential iterative loops in parallel which lead to deterministic parallel algorithms that are efficient both in theory and in practice The second part of this thesis

introduces Ligra the first high level shared memory framework for parallel graph traversal algorithms The framework allows programmers to express graph traversal algorithms using very short and concise code delivers performance competitive with that of highly optimized code and is up to orders of magnitude faster than existing systems designed for distributed memory This part of the thesis also introduces Ligra which extends Ligra with graph compression techniques to reduce space usage and improve parallel performance at the same time and is also the first graph processing system to support in memory graph compression The third and fourth parts of this thesis bridge the gap between theory and practice in parallel algorithm design by introducing the first algorithms for a variety of important problems on graphs and strings that are efficient both in theory and in practice For example the thesis develops the first linear work and polylogarithmic depth algorithms for suffix tree construction and graph connectivity that are also practical as well as a work efficient polylogarithmic depth and cache efficient shared memory algorithm for triangle computations that achieves a 2.5x speedup over the best existing algorithms on 40 cores This is a revised version of the thesis that won the 2015 ACM Doctoral Dissertation Award
