Principles and Practice Charles W. A. Newey, Graham H. Weaver, 1990 **Materials Principles and Practice** Charles Newey, Graham Weaver, 2013-10-22 Materials Principles and Practice deals with materials science in the technological context of making and using materials Topics covered include the nature of materials such as crystals an atomic view of solids temperature effects on materials and the mechanical and chemical properties of materials This book is comprised of seven chapters and begins with an overview of the properties of different kinds of material the ways in which materials can be shaped and the uses to which they can be put The next chapter describes the state of matter as a balance between the tendencies of atoms to stick together by chemical bonding or rattle apart by thermal agitation paying particular attention to ionic bonds and ionic crystals the structure and properties of polymers and transition metals The reader is also introduced to how the structure of materials especially microstructure can be manipulated to give desired properties via thermal mechanical and chemical agents of change This text concludes by describing the chemistry of processing and service of various materials Exercises and self assessment questions with answers are given at the end of each chapter together with a set of objectives This monograph will be a valuable resource for students of materials science and the physical sciences

Materials Handling Principles and Practice THEODORE H. ALLEGRI, SR., 2018 **Food Materials Science** José Miguel Aguilera, Peter J. Lillford, 2007-10-24 Food Materials Science provides the science behind structuring processes for foods and applications in food product design The first in its field the book is an invaluable reference The creation of added value from raw food materials is a legitimate aspiration of the modern food industry Adding value to foods requires knowledge of what the consumer wants and creating products that satisfy the demand Quality convenience and safety are the major drivers of the modern food industry Food manufacture is about producing billions of units of standardized products which must be cheap nutritious safe and appealing to the consumer s taste Food products are complex multicomponent and structured edible materials that nevertheless must comply with the laws of physics and fundamentals of engineering sciences In the last 20 years the design of food products with specific functionalities has advanced significantly by the application of scientific knowledge from disciplines such as polymer physics colloidal and mesoscopic physics materials science and new imaging and

probing techniques borrowed from chemistry biology and medicine Our knowledge of the relationship between microstructure processing and macroscopic properties continues to increase as the science of food materials advances at a fast pace This book is intended to those interested in viewing food technology as a way to preserve transform and create structures in foods and the related materials science aspects of it It attempts to present a unified vision of what today is considered to be food materials science and some derived applications The book may be used as a text in a course in food materials science at the senior or graduate level or as a supplement text in an advanced food technology course It will also serve as a reference book for professionals in the food industry
