Materials Science And Engineering Forging Stronger Links To Users:

Materials Science and Engineering National Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, Commission on Engineering and Technical Systems, Committee on Materials Science and Engineering: Forging Stronger Links to Users, 2000-01-16 Materials are the foundation and fabric of manufactured products. In fact many leading commercial products and military systems could not exist without advanced materials and many of the new products critical to the nation's continued prosperity will come only through the development and commercialization of new materials. Thus the field of materials science and engineering (MS E) affects quality of life, industrial competitiveness and the global environment. The United States leads the world in materials research and development but does not have as impressive a record in the commercialization of new materials. This book explores the relationships among the producers and users of materials and examines the processes of innovation from the generation of knowledge to the ultimate integration of a material into a useful product. The authors recommend ways to accelerate the rate at which new ideas are integrated into finished products. Real life case studies provide an accurate depiction of the processes that take materials and process innovations from the laboratory to the factory floor and ultimately to the consumer, drawing on experiences with three distinctive MS E applications: advanced aircraft turbines, automobiles and computer chips and information storage devices.

[Materials Science and Engineering : Forging Stronger Links to Users](#) ,1999 **Materials in the New Millennium** National Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, 2001-09-12 This book details the forum that was held by the National Materials Advisory Board at the National Academy of Sciences. The purpose of this forum was to bring the importance of materials to the attention of policy makers and to promote interactions between policy makers and the materials community. Four key themes were addressed: the critical role of materials in advancing technology and enhancing the nation's economy, security and health, industrial and societal needs that will require materials development in the new millennium. Materials research areas with the greatest potential for meeting those needs and federal and industrial research initiatives that can help the materials community meet those needs. To help focus this discussion, special sessions were convened to address the current and future roles of materials in four selected areas: information technology, health and biotechnology, national security and energy, and the environment.
