Curiosity Rod Pyle, 2014 Award winning science writer Rod Pyle provides a behind the scenes look into the recent space mission to Mars of Curiosity the unmanned rover that is now providing researchers with unprecedented information about the red planet

Missions to Mars Larry S. Crumpler, 2021-11-09 Missions to Mars is a vivid insider account of some of NASA's most vital and exciting missions to the Red Planet illustrated with full color photographs Human exploration of Mars is the most ambitious and exciting scientific goal of the twenty first century Few people know as much about this fascinating planet as Dr Larry Crumpler As one of the long term planning leads for the Mars Exploration Rover Project he helped control the daily communications between NASA and the rovers roaming the planet to gather scientific data Thanks to the Rover Project we now know that the dry red dust of the planet's surface hides a wet possibly living history and that conditions were present for the evolution of complex organic life In this magnificent compendium Dr Crumpler recounts the history of the Red Planet from the earliest days when ancient astronomers turned their eyes to the heavens to the breakthrough discoveries being unearthed by modern technology today including some of the first images from the rover Perseverance Paired with stunning photographs taken by rovers and NASA satellites this magnificent biography of the red planet allows us to understand and experience it as never before When the Spirit and Opportunity Rovers landed on Mars in January 2004 scientists expected them to function for ninety days But those three months turned into fifteen years With data gathered Dr Crumpler and his fellow team members were able to reconstruct the planet's stunning geological past when it was once inundated with water and perhaps could have supported microbial life Exploring fundamental questions about this remarkable planet Missions to Mars illuminates Mars significance in the solar system and the human imagination

Mars Probes Kelly Spence, 2016-07-15 In 1976 Viking 1 became the first spacecraft from Earth to land on Mars For the first time scientists were able to see the surface of the red planet Since then NASA and other space organizations have sent other probes to Mars and have learned a lot Readers find out all about the robots created especially for the task of exploring Mars through detailed diagrams full color photographs and interesting main content Including information about STEM careers and the background of planning a space mission using robots this book engages readers with exciting STEM content and careers

Working on Mars William J. Clancey, 2012 Beginning in 2004 a team of geologists and other planetary scientists did field science in a dark room in Pasadena exploring Mars from NASA's Jet Propulsion Laboratory JPL by means of the remotely operated Mars Exploration Rovers MER Clustered around monitors living on Mars time painstakingly plotting each movement of the rovers and their tools sensors and cameras these scientists reported that they felt as if they were on Mars themselves doing field science The MER created a virtual experience of being on Mars This book examines how the MER has changed the nature of planetary field science NASA cast the rovers Spirit and Opportunity as robotic geologists and ascribed

machine initiative to remotely controlled actions Clancey argues that the actual explorers were not the rovers but the scientists who imaginatively projected themselves into the body of the machine to conduct the first overland expedition of another planet The author investigates how the design of the rover mission enables field science on Mars explaining how the scientists and rover engineers manipulate the vehicle and why the programmable tools and analytic instruments work so well for them

Space Probes and Planetary Exploration William R. Corliss,1965 Discusses the objectives and technology of unmanned spacecraft

Is There Life on Mars? Michael Portman,2013-01-01 Advancements in space exploration over the years have shown us that Mars does not have alien beings living on its surface as it does in movies and books Mars is on the edge of the solar system s habitable zone It has water one of the necessary conditions for life as we know it though only in the form of ice Scientists believe that Mars had liquid water in the past and so they continue to look for signs of life Readers will find out what life on Mars would be like see vivid photographs and learn the details of upcoming NASA missions

Journey to Mars David Baker,2017-08-01 Mars is one of the most explored planets in the solar system Machines called probes and rovers gather photographs and information from Mars to be sent to Earth Learn more in *Journey to Mars* one of the titles in the All About Space Science series This series examines the history and science of space exploration It also delves into the careers and technological advancements associated with this exciting field of study

Seeing Like a Rover Janet Vertesi,2015-04-22 *Seeing Like a Rover* brings the Mars Exploration Rover mission to vivid life through the author s years of immersion with the team during routine operations on Mars In the book Janet Vertesi explores the social and technical achievements of making knowledge about Mars based on iterative digital representations of its surface We see how scientists on the Rover mission both perform the digital transformations that bring new features in their images to light enabling discovery as well as how they collectively interpret images to determine where the Rovers are located on Mars and what they should do next Using her close study of digital imaging which exhibits a sensitivity to the social context of scientific work Vertesi discusses how representation on the mission is never about finding a single way of truthfully representing Mars Representation is instead she argues a question of using image processing techniques strategically to reveal and conceal different features of the planet s surface and of bringing these multiple representations together to make both knowledge and collective decisions about exploration on the Red Planet *Seeing Like a Rover* speaks to many themes that are familiar to historians sociologists and philosophers of science Issues such as trust among knowledge making teams the different epistemic status and practices of the lab and the field and the heritage of visual languages in an emerging discipline are just as relevant in other periods and places Moreover by revealing how representational practices craft social visions Vertesi develops a framework that can be applied to scientific imaging across a variety of time periods and scientific contexts
