## **Meta Evolution The Future Of Life:**

*The Future of Life: Meta-Evolution* David Hunter Tow, 2006-10 The Future of Life Meta Evolution represents the first comprehensive formulation of the hypothesis that evolution is the unifying force underlying the dynamics of all processes in the universe both organic and inorganic. These include all facets of human existence and civilisation the sciences technology arts humanities and religion. In essence by applying quantum information network and decision theory it is demonstrated that an overarching evolutionary process shapes the spectrum of life and phenomena in the universe as a generic paradigm beyond Darwin's original biology based theory. The Theory of Evolution is undoubtedly the most powerful paradigm ever conceived by humans to explain their own existence. Since Darwin's epoch making treatise *Origin of Species* published in 1859 evolution has been centre stage universally recognised as the driving force in the emergence of modern humans from the genesis of life on this planet almost 4 billion years ago. However despite its ubiquitous brilliance as the jewel in the crown of human intellectual achievement the notion of evolution has never been developed to its full potential. It remains instead constrained within its biological cradle often reduced in everyday connotation to its lowest common denominator of survival of the fittest. The intention of this book is to re evaluate and expand the Darwinian model of evolution to demonstrate that its current application is only the tip of the intellectual iceberg and that by combining its formidable biological principles with those of decision complexity network quantum and information theory it emerges as an incalculably deeper and richer model than previously contemplated. It will be demonstrated that the evolutionary engine which drives biological development also drives all other dynamic adaptive processes the physical social cognitive economic political and technological and is in fact the major dynamic governing the Universe past present and future. It is further proposed to demonstrate that recent developments in artificial intelligence and ubiquitous computing through the Internet mark the next crucial stage in life's evolution involving the inevitable symbiosis of vast computational intelligence with the human mind. The major hypothesis developed in this book of a global all encompassing Theory of Evolution coupled with its potential for realising the emancipation of human intelligence and potential provides a vastly more powerful paradigm for exploring the Future of Life than current scientific scenarios. The resulting Omega state of infinite knowledge and wisdom which is proposed has been actively championed by a number of eminent 19th and 20th century philosophers such as Teilhard de Chardin Henri Bergson Schelling Alfred Whitehead Samuel Alexander and more recently by the leading physicist and futurist Professor Frank Tipler. However to date no equivalent scientific framework for supporting such a hypothesis has been provided. In conclusion The Future of Life Meta Evolution has been written not as an academic text but as primarily a non technical review of the evidence to support such a hypothesis in much the same vein as other recent publications in the popular science philosophy genre. It is hoped that this approach will therefore provide a window into the wider evolutionary debate for the general reader interested in one of the most critical emerging paradigm shifts of the 21st century.

*The Future of Life: A Unified*

*Theory of Evolution* David Hunter Tow,2010-09-11 The Future of Life A Unified Theory of Evolution represents the first comprehensive formulation of the hypothesis that evolution is the unifying force underlying the dynamics of all processes in the universe both organic and inorganic In essence by combining information decision network and quantum theory it is demonstrated that an overarching evolutionary process shapes the spectrum of life and all phenomena in the universe beyond Darwin's original biological theory    **Meta-evolution, the Future of Life** David Hunter Tow,2000    **The Third Law of Evolution and The Future of Life** Gerard A. J. M. Jagers op Akkerhuis,2024-11-25 This book offers a step by step introduction to an integrated theory of physical and biological evolution from the early universe to the world we know today To this end the well known laws of variation and selection are supplemented by a third law This law describes the increase in complexity based on the transitions from quarks to hadrons to atoms to molecules to bacteria to eukaryotic cells and so on These insights revolutionize existing theoretical frameworks for analyzing organization in nature accelerating developments in natural philosophy In this way the author develops a basic framework for thinking about evolution which can be applied to current debates in various research fields For example the new approach finally helps to find the systems based definitions of organism and life that have been sought for so long By extrapolating the framework one can even hypothesize about future evolution and our place as humans in it An exciting read for both philosophers and scientists    **Science and a Future Life** Frederic William Henry Myers,1893    *The Future of Man, Meta-psychic* Edward Caleb Randall,1908    *Science and a Future Life with Other Essays* Frederic William Henry Myers,1893    *Future Life in the Light of Ancient Wisdom and Modern Science* Louis-Lucien Baclé,1906    **Evolution** ,2002    **The New International Encyclopædia** Frank Moore Colby,Talcott Williams,1917    **The Problem of Human Life** Alexander Wilford Hall,1880    **The Annual American Catalog, 1905** ,1906    **Scientific American** ,2008    *Harper's Magazine* ,1927 Important American periodical dating back to 1850    **The New International Encyclopædia** ,1929    *Spiritualism* John Arthur Hill,1919    *Automatic Or Spirit Writing* Sara A.
