Metal Carcinogenesis Testing:

Metal Carcinogenesis Testing Max Costa, 2008-02-07 Metal Carcinogenesis Testing explains fundamental principles of metal carcinogenesis as they are currently understood and provides detailed practical descriptions of rapid and inexpensive in vitro assay methodology presently in use for the detection of potentially carcinogenic metals and their compounds. Mounting experimental evidence has suggested that a number of metals and their compounds are potentially carcinogenic to humans. Since humans are exposed to these potentially carcinogenic metals in industrial situations and through environmental pollution, it is essential that experimental protocols be available to identify the specific metal compounds that are potentially carcinogenic. This book affords a thorough description of the various carcinogenesis test systems available for metals, centering on those that are rapid, inexpensive, and most reliable. The principles are discussed at the level of human exposure, of animal studies, and of research in vitro. Additionally, the molecular mechanisms of metal-induced cancer are considered at each of these three levels. In large part, the emphasis rests on the use of in vitro biochemical and bacterial studies, including tissue culture, because these methods are the basis of the rapid and inexpensive screening of potentially carcinogenic substances. *Ultratrace Metal Analysis in Biological Sciences and Environment* Terence H. Genotoxic and Carcinogenic Metals Lawrence Fishbein, Arthur Furst, Myron A. Mehlman, 1987 [Metal Toxicology](#) Robert Goyer, Curtis D. Klaassen, Michael P. Waalkes, 1995 Metal Toxicology addresses the effects of metals on human health as well as their mechanisms of toxicity. Unlike most books on metal toxicity which are organized by individual metals, this book is arranged in an organ-by-organ basis. It deals with unifying mechanisms of metal toxicity within a given tissue and with exposure of a tissue to more than one metal at a time. Unique aspect of organ-specific orientation. Written by leading authorities in metal toxicology. Chapters of special interest include Risk Assessment, Emerging Technologies, and Molecular Biological Techniques. Serves as an excellent sourcebook of generalized information on metal toxicology, allowing for specific tissue system referencing. **Strategies for Short-term Testing for Mutagens/carcinogens** Byron E.
