Metalevel Inference Systems:

Meta-level Inference Systems Frank Van Harmelen, 1991

Agent-Oriented Programming Matthew M.

Huntbach, Graem A. Ringwood, 2003-07-31 A book that furnishes no quotations is me judice no book it is a plaything TL Peacock Crochet Castle The paradigm presented in this book is proposed as an agent programming language The book charts the evolution of the language from Prolog to intelligent agents To a large extent intelligent agents rose to prominence in the mid 1990s because of the World Wide Web and an ill structured network of multimedia information Age oriented programming was a natural progression from object oriented programming which C and more recently Java popularized Another strand of influence came from a revival of interest in robotics Brooks 1991a 1991b The quintessence of an agent is an intelligent willing slave Speculation in the area of artificial slaves is far more ancient than twentieth century science fiction One documented example is found in Aristotle s Politics written in the fourth century BC Aristotle classifies the slave as an animate article of property He suggests that slaves or subordinates might not be necessary if each instrument could do its own work at command or by anticipation like the statues of Daedalus and the tripods of Hephaestus Reference to the legendary robots devised by these mythological technocrats the former an artificer who made wings for Icarus and the latter a blacksmith god testify that the concept of robot if not the name was ancient even in Aristotle s time **A Tower**

Architecture for Meta-level Inference Systems Based on Omega-ordered Horn Theories Pierre E. Bonzon, 1995

Meta-programming in Logic Programming Harvey Abramson, M. H. Rogers, 1989 Meta programs which treat other

computer programs as data include compilers editors simulators debuggers and program transformers Because of the wide ranging applications meta programming has become a subject of considerable practical and theoretical interest This book provides the first comprehensive view of topics in the theory and application of meta programming covering problems of representation and of soundness and correctness of interpreters analysis and evaluation of meta logic programs and applications to sophisticated knowledge based systems Harvey Abramson is Reader in Computer Science at the University of Bristol England M H Rogers is Professor of Computer Science also at the University of Bristol Meta Programming in Logic Programming is in the series Logic Programming Research Reports and Notes edited by Ehud Shapiro **Proceedings of**

the 1990 Symposium on Applied Computing Hal Berghel, John Talburt, David Roach, 1990 **Intelligent Tutoring**

Systems Claude Frasson, Gilles Gauthier, 1992

Extensions of Logic Programming Roy Dyckhoff, 1994

The papers in this volume are extended versions of presentations at the fourth International Workshop on Extensions of Logic Programming held at the University of St Andrews March April 1993 Among the topics covered in the volume are definitional reflection and completion modules in lambda Prolog representation of logics as partial inductive definitions non procedural logic programming knowledge representation contradiction avoidance disjunctive databases strong negation linear logic programming proof theory and regular search spaces finite sets and constraint logic programming search space pruning and
