Metarepresentations Dan Sperber, 2000 **Metarepresentation, Self-organization and Art** Wolfgang Wildgen, Barend van Heusden, 2009 This book is about the interrelationship between nature semiosis metarepresentation and self consciousness and the role played by metarepresentation in evolution Representations must have emerged via self organization from non representational systems found in physics chemistry and biology Major steps have been the evolution of molecules macromolecules life and finally cultural and symbolic systems Representations and signs are therefore parts of a huge possibly branching ladder of beings Metarepresentations images representing images language about language and language use thoughts about thoughts constitute a fascinating theme within such diverse areas of research as philosophy literature theology anthropology and history neuroscience psychology and linguistics The contributions to this book reflect this variety of different but often interrelated perspectives on metarepresentation They also exemplify the difficulties of a truly interdisciplinary discourse and show how one may start such a discourse in the field of semiotics understood as a meta discipline which brings together all scientific enterprises dealing with human mind and human culture

Naturalism, Theism and the Cognitive Study of Religion Dr Aku Visala, 2013-06-28 This book provides a critical philosophical analysis of the claim that contemporary cognitive approaches to religion undermine theistic beliefs Recent scientific work into the evolution and cognition of religion has been driven by and interpreted in terms of a certain kind of philosophical and methodological naturalism The book argues that such naturalism is not necessary for the cognitive study of religion and develops an alternative philosophical and methodological framework This alternative framework opens the cognitive study of religion to theological and philosophical considerations and clarifies its relationship to other approaches to religious phenomena This unique contribution to discussions regarding the philosophical and theological implications of the cognitive study of religion summarizes the so far fragmentary discussion exposes its underlying assumptions and develops a novel framework for further discussion
