Techniques and System Design of Radar Active Jamming Guangfu Tang, Yifeng Cai, Rongbing Gan, Yaodong

Zhao, 2023-02-20 This book serves as a handbook for radar active jamming system designers in which design principles and methods are introduced in detail. The book starts from the basic concept and then discusses requirements analysis type selection key indicators description and design methods of radar active jamming system and each subsystem step by step. The content is expressed in an intelligible way and hence it is easy to follow even for beginners in this area. Since the authors of this book are all experts and have designed plenty of real systems their book certainly helps new engineers deal with different kinds of problems encountered while designing a radar active jamming system

Adaptive Radar Detection:

Model-Based, Data-Driven and Hybrid Approaches Angelo Coluccia, 2022-11-30 This book shows you how to adopt data driven techniques for the problem of radar detection both per se and in combination with model based approaches. In particular the focus is on space time adaptive target detection against a background of interference consisting of clutter possible jammers and noise. It is a handy concise reference for many classic model based adaptive radar detection schemes as well as the most popular machine learning techniques including deep neural networks and helps you identify suitable data driven approaches for radar detection and the main related issues. You'll learn how data driven tools relate to and can be coupled or hybridized with traditional adaptive detection statistics understand fundamental concepts schemes and algorithms from statistical learning classification and neural networks domains. The book also walks you through how these concepts and schemes have been adapted for the problem of radar detection in the literature and provides you with a methodological guide for the design illustrating different possible strategies. You'll be equipped to develop a unified view under which you can exploit the new possibilities of the data driven approach even using simulated data. This book is an excellent resource for Radar professionals and industrial researchers postgraduate students in electrical engineering and the academic community
