Software Pioneers Manfred Broy,Ernst Denert,2012-12-06 A lucid statement of the philosophy of modular programming can be found in a 1970 textbook on the design of system programs by Gouthier and Pont 1 1 Cfl0 23 which we quote below A well defined segmentation of the project effort ensures system modularity Each task follows a separate distinct program module At implementation time each module and its inputs and outputs are well defined there is no confusion in the intended interface with other system modules At checkout time the integrity of the module is tested independently there are few scheduling problems in synchronizing the completion of several tasks before checkout can begin Finally the system is maintained in modular fashion system errors and deficiencies can be traced to specific system modules thus limiting the scope of detailed error searching Usually nothing is said about the criteria to be used in dividing the system into modules This paper will discuss that issue and by means of examples suggest some criteria which can be used in decomposing a system into modules A Brief Status Report The major advancement in the area of modular programming has been the development of coding techniques and assemblers which 1 allow one module to be written with little knowledge of the code in another module and 2 allow modules to be reassembled and replaced without reassembly of the whole system

Welcome to the proceedings of the 2008 International Conference on Grid and Pervasive Computing (GPC 2008) which was held in Kunming, Yunnan, China, May 25-28, 2008.
