## **Markov Cell Structures Near A Hyperbolic Set:**

Markov Cell Structures near a Hyperbolic Set F. Thomas Farrell, Lowell Jones, 1993 The authors argument is a spiritual descendent of earlier work of Adler and Weiss Sina and Bowen and involves a close study of triangulations The discussion is long and technical but the outline of the proof is sketched clearly in Section 1 for the special case of italic F an expanding immersion A concluding section lists problems on hyperbolic sets Markov partitions and related matters remarks on topological invariants including the conjectured vanishing of Pontryagin classes for manifolds supporting Anosov diffeomorphisms may be of particular interest      **Markov cell structures near a hyperbolic set** Tom Farrell, Lowell Jones, 1993      **Deformation Theory of Pseudogroup Structures** Victor Guillemin, Shlomo Sternberg, 1966      *Symplectic Cobordism and the Computation of Stable Stems* Stanley O. Kochman, 1993 This memoir consists of two independent papers In the first The symplectic cobordism ring III the classical Adams spectral sequence is used to study the symplectic cobordism ring capital Greek Omega superscript over subscript italic capital S subscript italic p In the second The symplectic Adams Novikov spectral sequence for spheres we analyze the symplectic Adams Novikov spectral sequence converging to the stable homotopy groups of spheres      **The Full Set of Unitarizable Highest Weight Modules of Basic Classical Lie Superalgebras** Hans Plesner Jakobsen, 1994 This work contains a complete description of the set of all unitarizable highest weight modules of classical Lie superalgebras Unitarity is defined in the superalgebraic sense and all the algebras are over the complex numbers Part of the classification determines which real forms defined by anti linear anti involutions may occur Although there have been many investigations for some special superalgebras this appears to be the first systematic study of the problem      **Continuous Images of Arcs and Inverse Limit Methods** Jacek Nikiel, H. M. Tuncali, E. D. Tymchatyn, 1993 Continuous images of ordered continua are investigated The paper gives various properties of their monotone images and inverse limits of their inverse systems or sequences with monotone bonding surjections Some factorization theorems are provided Special attention is given to one dimensional spaces which are continuous images of arcs and among them various classes of rim finite continua The methods of proofs include cyclic element theory T set approximations and null family decompositions The paper brings also new properties of cyclic elements and T sets in locally connected continua in general      **Lattice Structures on Banach Spaces** Nigel John Kalton, 1993 The general problem addressed in this work is to characterize the possible Banach lattice structures that a separable Banach space may have The basic questions of uniqueness of lattice structure for function spaces have been studied before but here the approach uses random measure representations for operators in a new way to obtain more powerful conclusions      *Automorphisms of the Lattice of Recursively Enumerable Sets* Peter Cholak, 1995 A version of Harrington s capital Greek Delta<sup>3</sup> automorphism technique for the lattice of recursively enumerable sets is introduced and developed by reproving Soare s Extension Theorem Then this automorphism technique is used to show two technical theorems the High Extension Theorem I and the High

Extension Theorem II This is a degree theoretic technique for constructing both automorphisms of the lattice of re sets and isomorphisms between various substructures of the lattice
