Cyber Security Auditing, Assurance, and Awareness Through CSAM and CATRAM Sabillon, Regner, 2020-08-07 With the continued progression of technologies such as mobile computing and the internet of things IoT cybersecurity has swiftly risen to a prominent field of global interest. This has led to cyberattacks and cybercrime becoming much more sophisticated to a point where cybersecurity can no longer be the exclusive responsibility of an organization's information technology IT unit. Cyber warfare is becoming a national issue and causing various governments to reevaluate the current defense strategies they have in place. Cyber Security Auditing Assurance and Awareness Through CSAM and CATRAM provides emerging research exploring the practical aspects of reassessing current cybersecurity measures within organizations and international governments and improving upon them using audit and awareness training models specifically the Cybersecurity Audit Model CSAM and the Cybersecurity Awareness Training Model CATRAM. The book presents multi case studies on the development and validation of these models and frameworks and analyzes their implementation and ability to sustain and audit national cybersecurity strategies. Featuring coverage on a broad range of topics such as forensic analysis, digital evidence and incident management this book is ideally designed for researchers, developers, policymakers, government officials, strategists, security professionals, educators, security analysts, auditors and students seeking current research on developing training models within cybersecurity management and awareness.

Next-Generation Enterprise Security and Governance Mohiuddin Ahmed, Nour Moustafa, Abu Barkat, Paul Haskell-Dowland, 2022-04-19

The Internet is making our daily lives as digital as possible and this new era is called the Internet of Everything (IoE). The key force behind the rapid growth of the Internet is the technological advancement of enterprises. The digital world we live in is facilitated by these enterprises' advances and business intelligence. These enterprises need to deal with gazillions of bytes of data and in today's age of General Data Protection Regulation, enterprises are required to ensure privacy and security of large-scale data collections. However, the increased connectivity and devices used to facilitate IoE are continually creating more room for cybercriminals to find vulnerabilities in enterprise systems and flaws in their corporate governance. Ensuring cybersecurity and corporate

governance for enterprises should not be an afterthought or present a huge challenge. In recent times the complex diversity of cyber attacks has been skyrocketing and zero day attacks such as ransomware, botnet and telecommunication attacks are happening more frequently than before. New hacking strategies would easily bypass existing enterprise security and governance platforms using advanced persistent threats. For example in 2020 the Toll Group firm was exploited by a new crypto attack family for violating its data privacy where an advanced ransomware technique was launched to exploit the corporation and request a huge figure of monetary ransom. Even after applying rational governance, hygiene, cybersecurity configuration and software updates are often overlooked when they are most needed to fight cyber crime and ensure data privacy. Therefore the threat landscape in the context of enterprises has become wider and far more challenging. There is a clear need for collaborative work throughout the entire value chain of this network. In this context this book addresses the cybersecurity and cooperative governance challenges associated with enterprises which will provide a bigger picture of the concepts, intelligent techniques, practices and open research directions in this area. This book serves as a single source of reference for acquiring the knowledge on the technology, process and people involved in next generation privacy and security.
