Methods of Noncommutative Analysis Vladimir E. Nazaikinskii, Victor E. Shatalov, Boris Yu. Sternin, 2011-06-24 The series is devoted to the publication of monographs and high level textbooks in mathematics mathematical methods and their applications Apart from covering important areas of current interest a major aim is to make topics of an interdisciplinary nature accessible to the non specialist The works in this series are addressed to advanced students and researchers in mathematics and theoretical physics In addition it can serve as a guide for lectures and seminars on a graduate level The series de Gruyter Studies in Mathematics was founded ca 35 years ago by the late Professor Heinz Bauer and Professor Peter Gabriel with the aim to establish a series of monographs and textbooks of high standard written by scholars with an international reputation presenting current fields of research in pure and applied mathematics While the editorial board of the Studies has changed with the years the aspirations of the Studies are unchanged In times of rapid growth of mathematical knowledge carefully written monographs and textbooks written by experts are needed more than ever not least to pave the way for the next generation of mathematicians In this sense the editorial board and the publisher of the Studies are devoted to continue the Studies as a service to the mathematical community Please submit any book proposals to Niels Jacob Titles in planning include Mark M Meerschaert Alla Sikorskii and Mohsen Zayernouri Stochastic Models for Fractional Calculus second edition 2018 Flavia Smarazzo and Alberto Tesei Measure Theory Radon Measures Young Measures and Applications to Parabolic Problems 2019 Elena Cordero and Luigi Rodino Time Frequency Analysis of Operators 2019 Kezheng Li Group Schemes and Their Actions 2019 together with Tsinghua University Press Kai Liu Ilpo Laine and Lianzhong Yang Complex Differential Difference Equations 2021 Rajendra Vasant Gurjar Kayo Masuda and Masayoshi Miyanishi Affine Space Fibrations 2022

Non-commutative and Non-associative Algebra and Analysis Structures Sergei Silvestrov, Anatoliy Malyarenko, 2023-09-25 The goal of the 2019 conference on Stochastic Processes and Algebraic Structures held in SPAS2019 Vster s Sweden from September 30th to October 2nd 2019 was to showcase the frontiers of research in several important topics of mathematics mathematical statistics and its applications The conference has been organized along the following tracks 1 Stochastic processes and modern statistical methods in theory and practice 2 Engineering Mathematics 3 Algebraic Structures and applications This book highlights the latest advances in algebraic structures and applications focused on mathematical notions methods structures concepts problems algorithms and computational methods for the natural sciences engineering and modern technology In particular the book features mathematical methods and models from non commutative and non associative algebras and rings associated to generalizations of differential calculus quantum deformations of algebras Lie algebras Lie superalgebras color Lie algebras Hom algebras and their n ary generalizations semi groups and group algebras non commutative and non associative algebras and computational algebra interplay with q special functions and q analysis topology dynamical systems representation

theory operator theory and functional analysis applications of algebraic structures in coding theory information analysis geometry and probability theory The book gathers selected high quality contributed chapters from several large research communities working on modern algebraic structures and their applications The chapters cover both theory and applications and are illustrated with a wealth of ideas theorems notions proofs examples open problems and results on the interplay of algebraic structures with other parts of Mathematics The applications help readers grasp the material and encourage them to develop new mathematical methods and concepts in their future research Presenting new methods and results reviews of cutting edge research open problems and directions for future research will serve as a source of inspiration for a broad range of researchers and students

Stochastic Processes, Statistical Methods, and Engineering Mathematics Anatoliy Malyarenko, Ying Ni, Milica Rančić, Sergei Silvestrov, 2023-01-26 The goal of the 2019 conference on Stochastic Processes and Algebraic Structures held in SPAS2019 Vster s Sweden from September 30th to October 2nd 2019 was to showcase the frontiers of research in several important areas of mathematics mathematical statistics and its applications The conference was organized around the following topics 1 Stochastic processes and modern statistical methods 2 Engineering mathematics 3 Algebraic structures and their applications The conference brought together a select group of scientists researchers and practitioners from the industry who are actively contributing to the theory and applications of stochastic and algebraic structures methods and models The conference provided early stage researchers with the opportunity to learn from leaders in the field to present their research as well as to establish valuable research contacts in order to initiate collaborations in Sweden and abroad New methods for pricing sophisticated financial derivatives limit theorems for stochastic processes advanced methods for statistical analysis of financial data and modern computational methods in various areas of applied science can be found in this book The principal reason for the growing interest in these questions comes from the fact that we are living in an extremely rapidly changing and challenging environment This requires the quick introduction of new methods coming from different areas of applied science Advanced concepts in the book are illustrated in simple form with the help of tables and figures Most of the papers are self contained and thus ideally suitable for self study Solutions to sophisticated problems located at the intersection of various theoretical and applied areas of the natural sciences are presented in these proceedings

Lectures on the Geometry of Quantization Sean Bates, Alan Weinstein, 1997 These notes are based on a course entitled Symplectic Geometry and Geometric Quantization taught by Alan Weinstein at the University of California Berkeley fall 1992 and at the Centre Emile Borel spring 1994 The only prerequisite for the course needed is a knowledge of the basic notions from the theory of differentiable manifolds differential forms vector fields transversality etc The aim is to give students an introduction to the ideas of microlocal analysis and the related symplectic geometry with an emphasis on the role these ideas play in formalizing the transition between the mathematics of classical dynamics hamiltonian flows on symplectic manifolds and quantum mechanics unitary flows on Hilbert spaces These notes are

meant to function as a guide to the literature The authors refer to other sources for many details that are omitted and can be bypassed on a first reading

Quantization Methods in the Theory of Differential Equations Vladimir E. Nazaikinskii, B.-W. Schulze, Boris Yu. Sternin, 2002-05-16 This volume presents a systematic and mathematically rigorous exposition of methods for studying linear partial differential equations It focuses on quantization of the corresponding objects states observables and canonical transformations in the phase space The quantization of all three types of classical objects is carried out in a unified way

Algebra, Geometry and Mathematical Physics Abdenacer Makhlouf, Eugen Paal, Sergei D. Silvestrov, Alexander Stolin, 2014-06-17 This book collects the proceedings of the Algebra Geometry and Mathematical Physics Conference held at the University of Haute Alsace France October 2011 Organized in the four areas of algebra geometry dynamical symmetries and conservation laws and mathematical physics and applications the book covers deformation theory and quantization Hom algebras and n ary algebraic structures Hopf algebra integrable systems and related math structures jet theory and Weil bundles Lie theory and applications non commutative and Lie algebra and more The papers explore the interplay between research in contemporary mathematics and physics concerned with generalizations of the main structures of Lie theory aimed at quantization and discrete and non commutative extensions of differential calculus and geometry non associative structures actions of groups and semi groups non commutative dynamics non commutative geometry and applications in physics and beyond The book benefits a broad audience of researchers and advanced students

The Bulletin of Mathematics Books , 1992 *Mathematical Reviews* , 2001 Principal Symbol Calculus on Contact Manifolds Yuri Kordyukov, Fedor Sukochev, Dmitriy Zanin, 2024-09-26 This book develops a C algebraic approach to the notion of principal symbol on Heisenberg groups and using the fact that contact manifolds are

locally modeled by Heisenberg groups on compact contact manifolds Applying abstract theorems due to Lord Sukochev Zanin and McDonald a principal symbol on the Heisenberg group is introduced as a homomorphism of C algebras This leads to a version of Connes trace theorem for Heisenberg groups followed by a proof of the equivariant behavior of the principal symbol under Heisenberg diffeomorphisms Using this equivariance and the authors globalization theorem techniques are developed which enable further extensions to arbitrary stratified Lie groups and as a consequence the notion of a principal symbol on compact contact manifolds is described via a patching process Finally the Connes trace formula on compact contact sub Riemannian manifolds is established and a spectrally correct version of the sub Riemannian volume is defined different from Popp s measure The book is aimed at graduate students and researchers working in spectral theory Heisenberg analysis operator algebras and noncommutative geometry *American Book Publishing Record* ,2006
