Methods Of Macroeconomic Dynamics:

Methods of Macroeconomic Dynamics Stephen J. Turnovsky, 2000 Just as macroeconomic models describe the overall economy within a changing or dynamic framework the models themselves change over time In this text Stephen J Turnovsky reviews in depth several early models as well as a representation of more recent models They include traditional backward looking models linear rational expectations future looking models intertemporal optimization models endogenous growth models and continuous time stochastic models The author uses examples from both closed and open economies Whereas others commonly introduce models in a closed context tacking on a brief discussion of the model in an open economy Turnovsky integrates the two perspectives throughout to reflect the increasingly international outlook of the field This new edition has been extensively revised It contains a new chapter on optimal monetary and fiscal policy and the coverage of growth theory has been expanded substantially The range of growth models considered has been extended with particular attention devoted to transitional dynamics and nonscale growth The book includes cutting edge research and unpublished data including much of the author's own work *Workbook for Methods of Macroeconomic Dynamics*, 1995 [Workbook for methods of macroeconomic dynamics](#), 1996 [International Macroeconomic Dynamics](#) Stephen J. Turnovsky, 1997

International Macroeconomic Dynamics provides extensive applications of important macroeconomic dynamic models to the international economy For a long time the study of macroeconomics has focused almost exclusively on a closed economy and downplayed the role of international transactions Today however researchers recognize that one cannot fully understand domestic macroeconomic relationships without considering the global economy within which each country operates Increasingly economists are treating international transactions as an integral part of the macroeconomic system and international macroeconomics has become an area of intensive research activity International Macroeconomic Dynamics provides extensive applications of important macroeconomic dynamic models to the international economy It adopts the main contemporary macroeconomic framework the representative agent model and develops a series of models of increasing complexity The author considers both small and large economies and analyzes them in both deterministic and stochastic contexts The emphasis is very much on the development of the analytical models a novel feature is the extensive use of continuous time stochastic methods While the author applies the models to a range of important policy issues particularly issues of fiscal policy the reader is invited to view the analyses as blueprints for other applications [Market Imperfections and Macroeconomic Dynamics](#) Jean-Olivier Hairault, Hubert Kempf, 2013-03-14 Market Imperfections and Macroeconomic Dynamics is based upon a collection of papers originally presented at the 5th Theory and Methods in Macroeconomics T2M meeting in Paris France 2002 The contributions in this volume focus on a central theme the aggregate dynamic consequences of market imperfections Such effects are of great interest to researchers in macroeconomics as these imperfections play a primary role in the persistence of aggregate output the characteristics of the business cycles and the

interactions of agents over time Incorporating up to date techniques and methods these contributions exemplify the remarkable progress made by macroeconomists in tackling these issues The primary market for Market Imperfections and Macroeconomic Dynamics is academic researchers in economics and graduate students specializing in macroeconomics Divisions of economic studies in public administration and in financial organizations will also find this book beneficial

The Visible Hand Reiner B. Kobl, 2012-12-06 In the last decade highly innovative developments have taken place in theoretical economics The new focus of interest seems to be twofold Firstly nonlinear models for dynamic processes of the economy are constructed to extend the scope of linear models for the stationary equilibrium state and secondly a new approach is made to solve the everlasting problem of the relation between micro and macro economics The interdisciplinary field of synergetics is deeply involved in this evolution The author has made a remarkable contribution to both foci His application of synergetic concepts to the theory of business cycles combines a partial solution of the micro macro problem namely the modelling of the macro economic effect of the decisions of investors producers and consumers with the natural introduction of nonlinearities The arising new business cycle theory can on the one side be validated by empirical evidence and on the other hand the typical behavior of nonlinear dynamic systems including the transition to deterministic chaos can be clearly demonstrated The hope is justified that the model presented in this book is a further important step in reaching a new level of the quantitative comprehension of dynamic phenomena in the economy Stuttgart June 1991 Prof Dr Wolfgang Weidlich Foreword It is the author's objective to explain macroeconomic processes on the basis of micro economic decision making behaviour In order to achieve this goal the concept of synergetics is presented as a method of describing dynamic phenomena in multi component systems with cooperative interactions between their elements

Dynamic General Equilibrium Modeling

Burkhard Heer, Alfred Maußner, 2024-02-21 Contemporary macroeconomics is built upon microeconomic principles with its most recent advance featuring dynamic stochastic general equilibrium models The textbook by Heer and Maußner acquaints readers with the essential computational techniques required to tackle these models and employ them for quantitative analysis This third edition maintains the structure of the second dividing the content into three separate parts dedicated to representative agent models heterogeneous agent models and numerical methods At the same time every chapter has been revised and two entirely new chapters have been added The updated content reflects the latest advances in both numerical methods and their applications in macroeconomics spanning areas like business cycle analysis economic growth theory distributional economics monetary and fiscal policy The two new chapters delve into advanced techniques including higher order perturbation weighted residual methods and solutions to high dimensional nonlinear problems In addition the authors present further insights from macroeconomic theory complemented by practical applications like the Smolyak algorithm Gorman aggregation rare disaster models and dynamic Laffer curves Lastly the new edition places special emphasis on practical implementation across various programming languages

An Exploration of Evolutionary Methods in Macroeconomics James Woods, 2003 **Interactive Macroeconomics** Corrado Di Guilmi, Mauro Gallegati, Simone Landini, 2017-04-04 One of the major problems of macroeconomic theory is the way in which the people exchange goods in decentralized market economies. There are major disagreements among macroeconomists regarding tools to influence required outcomes. Since the mainstream efficient market theory fails to provide an internal coherent framework there is a need for an alternative theory. The book provides an innovative approach for the analysis of agent based models populated by the heterogeneous and interacting agents in the field of financial fragility. The text is divided in two parts the first presents analytical developments of stochastic aggregation and macro dynamics inference methods. The second part introduces macroeconomic models of financial fragility for complex systems populated by heterogeneous and interacting agents. The concepts of financial fragility and macroeconomic dynamics are explained in detail in separate chapters. The statistical physics approach is applied to explain theories of macroeconomic modelling and inference. **Introduction to Dynamic Economic Models** Brian S. Ferguson, Guay C. Lim, 1998

Unnecessary complexity has been avoided yet the models have been presented in the same general form as they appear in the professional literature *Essays in Macroeconomic Dynamics* Jesús Fernández-Villaverde Sánchez, 2001 **Methods of Dynamic Economics** J. R. Hicks, 1987-10-08 *Capital and Growth* was published in 1965 and rapidly established itself as a landmark in economic theory. In this volume Sir John takes his earlier work and examines it critically for its present day value. The result is a substantially reworked book based on the first and best part of his 1965 publication. The theme now more clearly identified is a comparative study of the economics of change and brings in many of Hicks's subsequent developments and refinements in particular a neo Austrian theory of capital which he developed in *Capital and Time* 1973. A new chapter on Keynes's methods has been added. The sum is a more complete classification of the family of models appropriate for analysing dynamic economics. **Macroeconomic Dynamics** Bernard J. F. Lonergan, Frederick E. Crowe, Robert M. Doran, Lonergan Research Institute, 1988-01-01 *Macroeconomic Dynamics* represents the economic thought of Lonergan at the end of his career. His analysis breaks from centralist theory and practice towards a radically democratic perspective on surplus income and non political control and explores more fully the ideas introduced in *For a New Political Economy*. **Indian Economic Review**, 1996 *International Trade and Macroeconomic Dynamics with Heterogeneous Firms* Fabio Ghironi, Marc J. Melitz, 2004 We develop a stochastic general equilibrium two country model of trade and macroeconomic dynamics. Productivity differs across individual monopolistically competitive firms in each country. Firms face a sunk entry cost in the domestic market and both fixed and per unit export costs. Only relatively more productive firms export. Exogenous shocks to aggregate productivity and entry or trade costs induce firms to enter and exit both their domestic and export markets thus

altering the composition of consumption baskets across countries over time In a world of flexible prices our model generates endogenously persistent deviations from PPP that would not exist absent our microeconomic structure with heterogeneous firms It provides an endogenous microfounded explanation for a Harrod Balassa Samuelson effect in response to aggregate productivity differentials and deregulation Finally the model successfully matches several moments of U S and international business cycles NBER website Exchange Rates and Macroeconomic Dynamics Pavlos V. Karadeloglou, Virginie Terraza, 2008-02-13

This book examines the numerous aspects of exchange rates and the dynamics of macroeconomics focusing on the PPP puzzle volatility levels with an exploration of the real exchange rate misalignment of the Central European countries single equation approach an examination of the real equilibrium exchange rate in China exchange rate dynamics and pass through effects in Russia and Hungary and structural shocks on economies Intertemporal

Macroeconomics Michael Carlberg, 1998-04-16 This book is concerned with the long run effects of budgetary and financial policy on aggregate demand and supply Here the long run is characterized by the accumulation of public debt and foreign assets This gives rise to a number of questions Will the long run equilibrium be stable What does long run instability imply Is the long run multiplier smaller than the short run multiplier Can the long run multiplier become negative This book takes a new approach to macroeconomic policy It assumes a growing economy as opposed to a stationary economy And it assumes that the government fixes the deficit rate as opposed to the tax rate It is argued that economic growth is an important factor of long run stability Similarly it is argued that a fixed deficit rate is an important factor of long run stability Previous versions of some parts were presented at the Conference on Money Banking and Insurance at the Annual Congress of the European Economic Association at the Annual Conference of the Royal Economic Society at the Jahrestagung des Vereins für Socialpolitik and at the Conference on Dynamic Disequilibrium Modelling I have benefited from comments by Friedel Bolle Giuseppe De Arcangelis Giancarlo Gandolfo Ulrich Geiger Alfred Maufiner Jochen Michaelis Wolfgang J Miickl M J M Neumann Daphni Marina Papadopoulou Franco Reither Karlhans Sauernheimer Michael Schmid Paul Bernd Spahn Hans Werner Sinn Torsten Tewes G F T Wolswijk and Jürgen Wolters Journal of Economic Dynamics & Control, 2003 **Method**, 2000
