Abstract. The paper, after a general survey of Metropolitan Area Network (MAN) issues, in which the market demand and recent trends in MAN concepts (e.g. relationship with Broadband Integrated Service Digital Network, B-ISDN) are considered, examines the ongoing MAN related activities inside standard-setting bodies such as IEEE (Institute of Electrical and Electronic Engineers) and ETSI (European Telecommunications Standards Institute). Emerging trends in architecture, protocols and services are reviewed.

A more detailed characterization of the bearer services MANs are required to provide (i.e. connectionless, non hierarchical connection oriented and hierarchical) is then given, emphasizing their broadbased nature and the related applications; the functions providing these services within the Distributed Queue Dual Bus (DQDB) framework are briefly described.

The last section is devoted to a discussion of MAN performance, specifically in terms of fairness, focusing again on the DQDB protocol, which appears to be the most promising solution for MANs, and on possible improvements of its characteristics.

1. INTRODUCTION

Metropolitan Area Networks (MANs) are a new and already "hot" telecommunication sector with several open issues now clearly emerging and influencing both the international marketing policy and standardization activities.

The demand for services which a MAN is typically required to provide is already well identified within the market. A growing community of business users, equipped with a plethora of PC's, host com-

puters, workstations, Local Area Networks (LANs) for use within a single site, are looking forward to extending their communication capability towards the outside world; metropolitan area coverage can be the first short-term feasible step.

Manufacturers, system integrators and Public Telecommunication Operators (PTOs) have recognized that this sector will offer major opportunities in the coming years. Finding proper solutions, however, is not straightforward, as this sector is on the boundary between the private and public domains. A way to tackle the problem is first of all the promotion and early implementation of suitable standard solutions, in order to ensure the compatibility needed for interworking between different environments.

Overseas industries and operators have first identified the market opportunities for MANs and are now
