Methods for Detecting DNA Damaging Agents in Humans H. Bartsch, K. Hemminki, I. K. O'Neill, 1988 Contributors to this volume focus on the fact that while reliable and sensitive detection of characteristic molecular markers for human exposure to chemical carcinogens is no longer a barrier to further study the evaluation of the risk of developing a tumor following such exposures remains a difficult problem Methods by which human exposure to carcinogens has been detected are described including immunoassay techniques physico chemical methods and post labelling assays A number of studies are then discussed in which molecular markers are being used to assess exposure to environmental occupational and iatrogenic carcinogens and to relate this information to the type or incidence of cancers that occur Environmental Health Perspectives, 1991 Human Cancer John Higginson, Calum S. Muir, Nubia Muñoz, 1992-06-04 A summary of the epidemiology of human cancer *Drinking Water and Health, Volume 9* National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Safe Drinking Water Committee, 1989-02-01 The National Research Council closes the landmark series *Drinking Water and Health* with Volume 9 published in two parts Part I DNA Adducts provides an overview of DNA adducts and their effects on human health explores the techniques currently in use for detecting them offers an outlook on future toxicity testing and lists specific recommendations for action Part II Mixtures explores the issues surrounding multiple chemical exposure from drinking water and reviews options for grouping compounds so their toxicity in mixtures can be reliably assessed The book describes alternative approaches and considers the option of developing a modified hazard index for chemical compounds **Methods to Assess DNA Damage and Repair** Robert G. Tardiff, Paul H. M. Lohman, Gerald N. Wogan, Scientific Group on Methodologies for the Safety Evaluation of Chemicals, 1994-08-16 Integrates data obtained from a variety of disciplines to evaluate the current state of knowledge regarding defense mechanisms and applies this information to estimate health risks to humans exposed to substances that alter genetic material Recognized experts document to a large extent which carcinogens can cause injury to human beings and their surroundings providing guidance for the structured acquisition of key information to reduce cancer risks throughout the environment Toxicological Profile for Xylenes, 1995 **Methods for Detecting DNA Damaging Agents in Humans** Heinz Bartsch, K. Hemminki, I. K. O'Neill, **Mechanisms of Carcinogenesis in Risk Identification** Harri Vainio, 1992 This comprehensive authoritative volume includes a consensus document drawn up by a working group of international experts in various fields of carcinogenesis It describes the multistage and multifactorial nature of carcinogenesis the different mechanisms of action of carcinogens epidemiological and laboratory means for their identification and proposed principles and procedures for their possible use in the prediction and evaluation of carcinogenic risks to humans Other chapters cover critical molecular targets in chemical carcinogenesis mechanisms of carcinogenicity animal carcinogenicity tests and their interpretations biological markers in exposed humans and data analysis and modelling This work will be a

Evaluates the carcinogenic risk to humans posed by infections with human immunodeficiency viruses types 1 and 2 HIV 1 and HIV 2 and human T cell lymphotropic viruses types I and II HTLV I and HTLV II Although emphasis is placed on carcinogenicity assessment the monographs also provide richly detailed descriptions of the viruses genetic and structural features methods of detection routes of transmission geographical distribution of infection clinical manifestations of non neoplastic disorders and currently available methods of treatment and prevention For HIV infection the evaluation of studies of cancer in humans considers abundant evidence from case reports and epidemiological studies pointing to greatly increased incidences of Kaposi s sarcoma and non Hodgkin s lymphoma in persons infected with HIV 1 Data suggesting an association between HIV infection and cervical anal and several other cancers are also carefully assessed Other data considered include findings from animal studies and investigations of the mechanisms by which immune dysfunction may contribute to the genesis of cancer On the basis of this evaluation the monograph concludes that infection with HIV 1 is carcinogenic to humans Infection with HIV 2 was classified as possibly carcinogenic to humans The second monograph provides a similarly detailed evaluation of human T cell lymphotropic viruses which are the only known human oncornavirinae Concerning studies of cancer in humans particular attention is given to evidence of an association between HTLV I and adult T cell leukemia lymphoma which occurs almost exclusively in areas where this infection is endemic In addition several case control studies have found an association between HTLV I seroprevalence and tumors of the vagina cervix and liver but confounding effects and bias could not be excluded The

evaluation also considered findings from animal carcinogenicity studies and from investigations of the molecular mechanisms of leukemogenesis. On the basis of this evaluation, the monograph concludes that HTLV I is carcinogenic to humans. HTLV II could not be classified as to its carcinogenicity to humans.
