**Methods in Gene Technology** J.W. Dale,P.G. Sanders,1995-03-15 Gene probes whether RNA or DNA have played a central role in the rapid development of molecular biology The wide variety of applications is matched by a considerable diversity in the methods used for generating probes a complete account of which would be very difficult to make Instead this second volume in the series combines a selection of newer gene probe procedures with a review of the most important established methods together with some examples of the ways in which gene probes can be applied In doing so the book aims to act not only as an introductory manual for newcomers to the field but also as a means of broadening the horizons of existing researchers *Kirk-Othmer Concise Encyclopedia of Chemical Technology, 2 Volume Set* Kirk-Othmer,2007-07-16

This is an easily accessible two volume encyclopedia summarizing all the articles in the main volumes Kirk Othmer Encyclopedia of Chemical Technology Fifth Edition organized alphabetically Written by prominent scholars from industry academia and research institutions the Encyclopedia presents a wide scope of articles on chemical substances properties manufacturing and uses on industrial processes unit operations in chemical engineering and on fundamentals and scientific subjects related to the field

*Interactions using 'meta-omics' techniques* Tao Lin,Maayan Levy,2024-12-31 Given the success of Volume I of this Research Topic we are pleased to announce the launch of Volume II New Techniques in Microbiome Research Microbiome research is driven by an interest in the mechanism of how the microbiota impacts and respond to disease To date only a small percentage of the bacteria that comprise the human microbiome have been isolated identified and studied More than 95% of microorganisms have not been isolated and cultured because the required growth conditions cannot be reproduced in the laboratory However recent technological advances in next generation sequencing and metagenomics have made it feasible to analyze the entire human microbiome Improvement in technology has made it possible to culture the unculturable human microbiota isolate and identify the anaerobes For example human noroviruses have been replicated in stem cell derived human enteroids complex microbiota have been co cultured in an anaerobic intestine on a chip system a novel human enteroid anaerobe co culture system has been used to study microbial host interaction under physiological hypoxia and microbial communities have been cultured from fecal samples using mini bioreactor arrays
