Heil, Roland Bobbink, Nuri Trigo Boix, 2003 Mexico has been recognized as one of the most diverse countries in the world with roughly 10-12% of world's species in a territory of only approximately 1.5% of the world's total emerged land. In general the explanation for the high number of species richness in Mexico has been sought in the complex geologic history the varied climatic regions because of the large altitudinal differences and the fact that two of the major realms the Nearctic and Neotropic meet in Mexico. This book shows numerous methodologies for collecting processing and analyzing data from natural areas illustrating it in applications to Mexico's Iztaccihuatl Popocatepetl National Park. The book is written for ecologists geographers graduate biology students and natural resource managers. It therefore responds directly and primarily to their viewpoints and objectives. However since ecosystem management and decisions about natural area preservation take place within socioeconomic and political environments that are dynamic and plural conflicts with those objectives are sure to arise. Therefore the last chapter goes beyond managers' objectives and viewpoints per se to explore and respond to potential conflicts.      **THE ROUGH GUIDE TO MEXICO**,      **Appleton's guide to Mexico, including a chapter on Guatemala** Alfred Ronald Conkling, 1884      **Appleton's Guide to Mexico** Alfred Ronald Conkling, 1886
