# OPTIMIZED SHOOTING METHODS

Shooting methods are a class of numerical methods for solving differential equations. They are based on the idea of discretizing the differential equation and solving the resulting system of equations. The shooting method is a numerical method for solving initial value problems for ordinary differential equations (ODEs). It is a type of direct numerical method, which means that it does not require the solution of a system of linear equations at each time step. Instead, it uses a fixed-point iteration to find the solution at each time step. The shooting method is a type of direct numerical method, which means that it does not require the solution of a system of linear equations at each time step. **Popularizing Mathematical Methods in the People's Republic of China** L.K. Hua,Wang,2012-12-06 Professor Hua Loo Keng is the first person to have undertaken the task of popularizing mathematical methods in China As early as 1958 he proposed that the application of operations research methods be initiated in industrial production With his students Yu Ming I Wan Zhe Xian and Wang Yuan Professor Hua visited various transportation departments to promote mathematical methods for dealing with transportation problems and a mass campaign was organized by them and other mathematicians to advance and apply linear programming methods to industrial production in Beijing and in Shandong province However due to the fact that these methods have limited applications and their computation is rather complex their popularization and utilization in China have so far been restricted to a small number of sectors such as the above mentioned transportation departments In 1958 Hua Loo Keng proposed the use of Input Output methods in the formulation of national economic plans Apart from publicizing this method he carried out in depth research on the subject He also gave lectures on related non negative matrix theory pointing out the economic significance of various theoretical results
