Additionally, focus is placed on sustainability and energy efficiency demonstrating how photonics may enhance industrial processes and assist renewable energy management. Finally, the book reviews the development of machine learning methods for optimization and the integration of artificial intelligence with photonic systems which are described in ample detail. In order to assist researchers those are not familiar with the subfield each chapter starts by providing an overview of the primary concepts to be discussed.

**Optoelectronics and Photonics** Safa O. Kasap, 2001 This book takes a fresh look at the last three decades and enormous developments in the new electro optic devices and associated materials. General Treatment and various proofs are at a semiquantitative level without going into detailed physics. Contains numerous worked examples and solved problems. Chapter topics include wave nature of light, dielectric waveguides and optical fibers, semiconductor science and light emitting diodes, photodetectors, photovoltaic devices and polarization and modulation of light. For the study of optoelectronics by electrical engineers.

**Graphene Photonics, Optoelectronics, and Plasmonics** Qiaoliang Bao, Huiying Hoh, Yupeng Zhang, 2017-09-07 Graphene has been hailed as a rising star in photonics and optoelectronics. The wonderful optical properties of graphene make possible the multiple functions of signal emission, transmission, modulation and detection to be realized in one material. This book compiles and details cutting edge research in graphene photonics, plasmonics and broadband optoelectronic devices. Particularly, it emphasizes the ability to integrate graphene photonics onto the silicon platform to afford broadband operation in light routing and amplification which involves components such as the polarizer, the modulator and the photodetector. It also includes other functions such as a saturable absorber and an optical limiter. The book provides a comprehensive overview of the interrelationship between the operation of these conceptually new photonic devices and the fundamental physics of graphene involved in the interactions between graphene and light.
