## **Ordered Exponential Fields:**

*Ordered Exponential Fields* Salma Kuhlmann, 2000 Model theoretic algebra has witnessed remarkable progress in the last few years It has found profound applications in other areas of mathematics notably in algebraic geometry and in singularity theory Since Wilkie's results on the  $\omega$ -minimality of the expansion of the reals by the exponential function and most recently even by all Pfaffian functions the study of  $\omega$ -minimal expansions of the reals has become a fascinating topic The quest for analogies between the semi algebraic case and the  $\omega$ -minimal case has set a direction to this research Through the Artin-Schreier Theory of real closed fields the structure of the non archimedean models in the semi algebraic case is well understood For the  $\omega$ -minimal case so far there has been no systematic study of the non archimedean models The goal of this monograph is to serve this purpose The author presents a detailed description of the non archimedean models of the elementary theory of certain  $\omega$ -minimal expansions of the reals in which the exponential function is definable The example of exponential Hardy fields is worked out with particular emphasis The basic tool is valuation theory and a sufficient amount of background material on orderings and valuations is presented for the convenience of the reader

*Groups, Modules, and Model Theory - Surveys and Recent Developments* Manfred Droste, László Fuchs, Brendan Goldsmith, Lutz Strüngmann, 2017-06-02 This volume focuses on group theory and model theory with a particular emphasis on the interplay of the two areas The survey papers provide an overview of the developments across group module and model theory while the research papers present the most recent study in those same areas With introductory sections that make the topics easily accessible to students the papers in this volume will appeal to beginning graduate students and experienced researchers alike As a whole this book offers a cross section view of the areas in group module and model theory covering topics such as DP minimal groups Abelian groups countable 1 transitive trees and module approximations The papers in this book are the proceedings of the conference New Pathways between Group Theory and Model Theory which took place February 1-4 2016 in Mülheim an der Ruhr Germany in honor of the editors' colleague Rüdiger Göbel This publication is dedicated to Professor Göbel who passed away in 2014 He was one of the leading experts in Abelian group theory

*The History of Continuity* Stewart Shapiro, Geoffrey Hellman, 2021 Mathematical and philosophical thought about continuity has changed considerably over the ages from Aristotle's insistence that a continuum is a unified whole to the dominant account today that a continuum is composed of infinitely many points This book explores the key ideas and debates concerning continuity over more than 2500 years
