Managing The Chinese Environment:

Environmental Management in China Jing Wu, I-Shin Chang, 2020-05-22 This book details various stages in the introduction establishment and evolution of China's environmental management system. By combining a literature review, comparative analysis, and case study, it investigates the environmental management system in several key periods in order to systematically assess the necessary measures and appropriate adjustments the Chinese Government implemented to reconcile the growing conflicts between economic development and resources conservation in the context of rapid economic growth and economic transformation. Given its scope, the book offers a valuable resource for experts, scholars, and government officials in related fields.

Managing the Chinese Environment Richard L. Edmonds, 2000 In the coming decades, environmental issues will play an increasing role in China's economic development, drive internal politics, legal development, international relations, and regional development issues. While several books have appeared in the 1990s which describe tangible aspects of China's environmental degradation, this book concentrates its attention on management of China's environment within various contexts and represents the state of thinking on the subject by some of the world's key social scientists in this field. It contains an international perspective of environmental problems in China, often lacking in books about the Chinese environment. Chapters discuss environmental degradation in Chinese history, organisation of China's environmental protection network, the legal framework for environmental protection, agricultural land issues, water issues, biodiversity, energy, pollution, public health, and business opportunities for foreign firms. While this book shows that there is lots of room for optimism, it also indicates that many environmental problems remain intractable and some are worsening.

Environmental Law in China Charles McElwee, 2010-12-01 In recent years, China's leaders have started to confront the environmental, economic, and social costs of unchecked development. China's increasing reliance on foreign oil has engendered national security fears and launched a drive for more efficient transportation systems and domestic renewable energy projects. Meanwhile, pressure from a rising middle class and the international community has focused leadership attention on ways to make China's economic engine run more efficiently and with less impact upon the domestic and global environment. This profound shift in priorities has elevated environmental sustainability to the top of the national agenda. To advance this new agenda, the environmental laws that China has enacted over the past thirty years are being strengthened, and new environmental regulations and standards are being issued everyday. Entities operating in China are faced with the need to understand the impact of China's environmental law requirements upon their businesses and to take actions to ensure that they are in compliance with those requirements.

In *Environmental Law in China: Managing Risk and Ensuring Compliance*, Charles McElwee addresses how China's environmental regulatory and legal frameworks are structured, how to maintain operational compliance with the environmental laws and regulations, how to ensure products sold in China comply with environmental regulations, and the potential risks and liabilities that attend non-compliance. McElwee offers unique

insight into how environmental law is in fact applied setting forth a realistic account of the way companies encounter Chinese environmental regulations at both the local and national levels Environmental Management in Construction Heng Li,Zhen Chen,2007-01-24 Demands on the construction industry are changing and it is now virtually essential for environmental management to be considered at all stages of a project Many construction managers are finding a quantitative approach useful and this book outlines four quantitative methods which can be applied at different construction stages and which fit within a comprehensive framework of dynamic Environmental Impact Assessment EIA These include a method to quantitatively evaluate and reduce pollution and hazards levels a method to evaluate the environmental consciousness of proposed construction plans a method to reduce on site construction wastes through an incentive reward programme a method to promote C and D waste exchange in the local construction industry With an experimental case study of the application of these methods this book delivers a comprehensive review of environmental management issues in construction With regulatory requirements potentially favouring the quantitative approach this timely guide ensures that contractors will be able to keep pace with environmental management standards Successful Business Dealings and Management with China Oil, Gas and Chemical Giants Henry Wang,2014-01-10 This book focuses on doing businesses successfully with China oil gas and chemicals companies with real business cases on business management and contract negotiations all under one theme Drawing on the author s extensive experiences and knowledge of the China oil gas and chemicals industries the book presents a comprehensive and practical guide to the China oil industry structure and major Chinese oil companies It analyses China s oil gas and chemicals markets and its growth into the largest oil consumption market in the world It also examines energy security concerns and mitigation strategies to diversify crude import sources The book also analyses the key domestic and international players in China including the largest state multinational and national oil companies It looks at the largest China oil gas and chemical companies and analyses their profile business strategies leaders with relevant case studies It then examines successful engagement negotiation and management with the China giants The book illustrates with business case studies on successfully negotiating and managing business relations to foster trust and promote cooperation as well as the risks and rewards Business leaders universities business schools and government agencies will appreciate the book with its in depth knowledge and analysis of the China oil gas and chemical industries together with relevant business cases

Managing China's Energy Sector Hongyi Lai,Malcolm Warner,2017-10-02 Since China has now become the world s largest energy consumer its energy sector has understandably huge implications for the global economy This book examines the transformation of China s conventional and renewable energy sectors with special attention to state business relations Two studies examine the development of China s energy profile especially China s renewable energy Two others explore governmental relations with state owned enterprises SOEs and their reform Despite drastic restructuring in the late 1990s SOEs continue their oligopolistic control of the oil and gas sectors and even overshadow the stock market Three studies

investigate the factors that help propel the expansion of China's conventional energy firms as well as those producing renewable energy i.e. solar PV industry. A study of China's solar PV industry suggests that China's governmental support for it has evolved from subsidising production a mercantile stage aimed at expanding the industry's global production and export share to subsidising the demand side aiming at expanding domestic demand and absorbing redundant manufacture capacity. Another review of this industry finds that firms tend to pay heavy attention to extra-firm institutional network relationships both inside and outside China and that buyer-supplier networks are influenced by extra-local managerial education. The final chapter compares China's provinces and their embedded carbon footprints per capita in urban areas from a consumption perspective using a self-organizing feature map (SOFM) model. This book was originally published as a special issue of the Asia Pacific Business Review.

Environmental Protection Policy and Experience in the U.S. and China's Western Regions Joel J. Kassiola, Sujian Guo, Jijiao Zhang, 2010-06-14. China is a multiethnic country with vast territory a land of diverse ecosystems. With the drive for industrialization in China and the implementation of western grand development strategy in western regions both governments and people face great challenges in environmental protection and sustainable use of biodiversity resources as a result of growing interaction between human activities and natural environment. To meet the challenges governments in these regions need to adopt a series of important policy measures not only to reduce industrial emissions but also to return farmland to forests and pasture to grasslands and to implement measures of ecological migration to reduce human activities in ecological conservation areas. In this regard China must not only learn profound lessons from industrialized countries but also search for international cooperation. The United States provides some good comparative case studies on the environmental protection grassroots environmental management and conservation policies in western regions. This book attempts to address key questions about Chinese and U.S. environmental policies by looking at historical development of environmental protection and current environmental policy in the western regions of the two countries.

Local Environmental Politics in China Genia Kostka,2017-07-05 Knowledge and insight in national environmental governance in China is widespread However increasingly it has been acknowledged that the major problems in guiding the Chinese economy and society towards sustainability are to be found at the local level This book illuminates the fast changing dynamics of local environmental politics in China a topic only marginally addressed in the literature In the course of building up an institutional framework for environmental governance over the last decade local actors have generated a variety of policy innovations and experiments In large measure these are creative responses to two main challenges associated with translating national environmental policies into local realities The first such challenge is a policy implementation gap stemming from the absence of the state capacity necessary to the implementation of environmental measures The second challenge refers to the need for local non state actors to engage in environmental

management oftentimes such a participation gap contributes to implementation failures In recent years we have seen a multitude of initiatives within China at the provincial level and below designed to bridge both gaps Hence the central aim of this book is to assess these experiments and innovations in local environmental politics This book was originally published as a special issue of the Journal of Environmental Policy and Planning Marketing Management in China Philip Kotler, Kevin Lane Keller, Taihong Lu, 2009 This adaptation provides hard to find and well researched China cases that offer insights while covering a wide variety of contexts spanning international companies operating in China to Chinese companies that are beginning to venture overseas
