Managing Ecosystems:

Ecosystems Kristiina Vogt, John Gordon, John Wargo, Daniel Vogt, Heidi Asbjornsen, Peter A. Palmiotto, Heidi J. Clark, Jennifer L. O'Hara, William S. Keeton, Toral Patel-Weynand, Evie Witten, 2013-12-01 Ecosystem management has gained widespread visibility as an approach to the management of land to achieve sustainable natural resource use. Despite widespread interest in this emerging management paradigm Ecosystems Balancing Science with Management is the first book to directly propose approaches for implementing ecosystem management give examples of viable tools and discuss the potential implications of implementing an ecosystem approach. These ideas are framed in a historical context that examines the disjunction between ecological theory environmental legislation and natural resources management Ecology, Uncertainty and Policy John Handmer, 2017-09-29 A broad and comprehensive exploration of the role of the ecological sciences in sustainability for undergraduates. The urgent quest for more sustainable patterns of development has placed new and difficult demands on both scientists and policy makers as they seek to establish more informed and effective policy processes and management regimes in the the face of pervasive uncertainty. Written by an international group of authors from a range of disciplines ecology geography law policy analysis and others the chapters explore issues of scientific legitimacy public participation non governmental organisations inter sectoral communication and pragmatic public policy across a wide range of ecosystem management contexts

Cushman, 2020-07-17 **Managing for Healthy Ecosystems** David J. Rapport, Bill L. Lasley, Dennis E. Rolston, N. Ole Nielsen, Calvin O. Qualset, Ardeshir B. Damania, 2002-10-29 One of the critical issues of our time is the dwindling capacity of the planet to provide life support for a large and growing human population. Based on a symposium on ecosystem health Managing for Healthy Ecosystems identifies key issues that must be resolved if there is to be progress in this complex area such as Evolving methods for regional ecosystem health assessment employing complex adaptive systems coupled with adaptive technologies to permit accurate determination of changes in regional and global environments. Issues and methods for assessing monitoring and managing diversity and its impact on human health in the context of climate change agroecosystems restoration of forests politics culture and tradition. Leading thinkers in the field provide a coherent synthesis and a benchmark for the practice of this emerging field worldwide. The more than 100 peer reviewed papers are grouped into three major parts. The first Emerging Concepts explores the diverse meanings of ecosystem health within ecological, socio-economic and human health perspectives and the linkages to related concepts such as ecological integrity, sustainable development and ecological footprints. The second part Issues and Methods introduces methods for assessing and monitoring ecosystem health including strategies for gaining political and stakeholder input and support for science based ecosystem management. The final part Case Studies reports experiences of interdisciplinary teams grappling with specific issues in a

variety of aquatic and terrestrial ecosystems

Ecosystem Management for Parks and Wilderness

James K. Agee, Darryl R. Johnson, 1988 The need for cooperation among government agencies as well as an interdisciplinary approach to the increasingly challenging and complicated problem of managing park and wilderness areas prompted the University of Washington College of Forest Resources the National Park Service and the Forest Service to sponsor an ecosystem management workshop for scientists planners and managers To develop an improved conceptual approach to managing change in ecosystems crossing natural and political boundaries the workshop focused on defining terms uncovering areas of misunderstanding and barriers to cooperation and developing methods to determine the most important problems and issues Three needs emerged from the prioritization process a precise definition of the management objectives for park and wilderness lands and how to integrate them with objectives for surrounding lands nationally as well as site specific more information about physical biological and social components of park and wilderness ecosystems from both sides of political boundaries and key indicators of ecosystem condition as well as methods for evaluating management effectiveness All of these common themes point to a need for more precise direction in management goal setting and more accurate assessment of progress toward goals The book includes an introductory chapter by the editors and summary in which they outline a direction for ecosystem management in the next critical decades The other chapters by individual contributors include studies on laws governing park and wilderness lands paleoecological records that reveal the historic effects of climatic variations on vegetation change succession and natural disturbance in relation to the problems of what can and should be preserved managing ecosystems for large populations of vertebrates the management of large carnivores effects of air pollution lake acidification human ecology and environmental management the role of economics cooperation in ecosystem management and management challenges in Yellowstone National Park

Ecosystem Management

Gary Meffe, Larry Nielsen, Richard L. Knight, Dennis Schenborn, 2012-08-31 Today's natural resource managers must be able to navigate among the complicated interactions and conflicting interests of diverse stakeholders and decisionmakers Technical and scientific knowledge though necessary are not sufficient Science is merely one component in a multifaceted world of decision making And while the demands of resource management have changed greatly natural resource education and textbooks have not Until now Ecosystem Management represents a different kind of textbook for a different kind of course It offers a new and exciting approach that engages students in active problem solving by using detailed landscape scenarios that reflect the complex issues and conflicting interests that face today's resource managers and scientists Focusing on the application of the sciences of ecology and conservation biology to real

world concerns it emphasizes the intricate ecological socioeconomic and institutional matrix in which natural resource management functions and illustrates how to be more effective in that challenging arena Each chapter is rich with exercises to help facilitate problem based learning The main text is supplemented by boxes and figures that provide examples perspectives definitions summaries and learning tools along with a variety of essays written by practitioners with on the ground experience in applying the principles of ecosystem management Accompanying the textbook is an instructor s manual that provides a detailed overview of the book and specific guidance on designing a course around it Download the manual here Ecosystem Management grew out of a training course developed and presented by the authors for the U S Fish and Wildlife Service at its National Training Center in Shepherdstown West Virginia In 20 offerings to more than 600 natural resource professionals the authors learned a great deal about what is needed to function successfully as a professional resource manager The book offers important insights and a unique perspective dervied from that invaluable experience
