Managing Gigabytes:

Managing Gigabytes Ian H. Witten, Alistair Moffat, Timothy C. Bell, 1999-05-03 This book is the Bible for anyone who needs to manage large data collections. It's required reading for our search gurus at Infoseek. The authors have done an outstanding job of incorporating and describing the most significant new research in information retrieval over the past five years into this second edition. Steve Kirsch, Cofounder Infoseek Corporation. The new edition of Witten, Moffat and Bell not only has newer and better text search algorithms but much material on image analysis and joint image text processing. If you care about search engines you need this book; it is the only one with full details of how they work. The book is both detailed and enjoyable; the authors have combined elegant writing with top grade programming. Michael Lesk, National Science Foundation. The coverage of compression, file organizations and indexing techniques for full text and document management systems is unsurpassed. Students, researchers and practitioners will all benefit from reading this book. Bruce Croft, Director Center for Intelligent Information Retrieval at the University of Massachusetts. In this fully updated second edition of the highly acclaimed *Managing Gigabytes*, authors Witten, Moffat and Bell continue to provide unparalleled coverage of state of the art techniques for compressing and indexing data. Whatever your field, if you work with large quantities of information, this book is essential reading: an authoritative theoretical resource and a practical guide to meeting the toughest storage and access challenges. It covers the latest developments in compression and indexing and their application on the Web and in digital libraries. It also details dozens of powerful techniques supported by mg, the authors' own system for compressing, storing and retrieving text, images and textual images. mg's source code is freely available on the Web.

Computer Aided Systems Theory - EUROCAST 2005 Roberto Moreno-Díaz, Franz Pichler, Alexis Quesada Arencibia, 2005-10-19 The concept of CAST (computer aided systems Theory) was introduced by F. Pichler of Linz in the late 1980s to include those computer theoretical and practical developments used as tools to solve problems in system science. It was considered as the third component, the other two being CAD and CAM, that would provide for a complete picture of the path from computer and systems sciences to practical developments in science and engineering. The University of Linz organized the first CAST workshop in April 1988, which demonstrated the acceptance of the concepts by the scientific and technical community. Next, the University of Las Palmas de Gran Canaria joined the University of Linz to organize the first international meeting on CAST, Las Palmas, February 1989, under the name EUROCAST 1989, a very successful gathering of systems theorists, computer scientists and engineers from most European countries, North America and Japan. It was agreed that EUROCAST international conferences would be organized every two years. Thus, the following EUROCAST meetings took place in Krems 1991, Las Palmas 1993, Innsbruck 1995, Las Palmas 1997, Vienna 1999, Las Palmas 2001 and Las Palmas 2003, in addition to an extra European CAST conference in Ottawa in 1994. Selected papers from those meetings were published as Springer Lecture Notes in Computer Science, vols 410, 585, 763, 1030, 1333, 1728, 2178 and 2809, and in several special issues of

Information Retrieval David A. Grossman, Ophir Frieder, 2012-11-12 Interested in how an efficient search engine works Want to know what algorithms are used to rank resulting documents in response to user requests The authors answer these and other key information retrieval

design and implementation questions This book is not yet another high level text Instead algorithms are thoroughly described making this book ideally suited for both computer science students and practitioners who work on search related applications As stated in the foreword this book provides a current broad and detailed overview of the field and is the only one that does so Examples are used throughout to illustrate the algorithms The authors explain how a query is ranked against a document collection using either a single or a combination of retrieval strategies and how an assortment of utilities are integrated into the query processing scheme to improve these rankings Methods for building and compressing text indexes querying and retrieving documents in multiple languages and using parallel or distributed processing to expedite the search are likewise described This edition is a major expansion of the one published in 1998 Besides updating the entire book with current techniques it includes new sections on language models cross language information retrieval peer to peer processing XML search mediators and duplicate document detection
